

Phase 3 — Hermes Live Adapter Report

Generated: 2026-05-07T23:12:59Z

Result

Status: BLOCKED / SAFE 503

Hermes live chat is still blocked by hermes_safe_live_chat_adapter_not_configured. Mission Control did not fake hermes_called:true.

Service Proof

| Check | Result |

| --- | --- |

| `hermes-gateway.service` active | `active` |

| MainPID | `1796446` |

| ActiveEnterTimestamp | `Thu 2026-05-07 15:59:46 EDT` |

| Service command | Hermes gateway run command is installed and running; full local paths are intentionally omitted from this owner-facing report. |

Mission Control Route Proof

| Route | Auth | HTTP | Key result |

| --- | --- | --- | --- |

| `GET /api/bridge/hermes/status` | yes | 200 | ok=True, mode=hermes_lieutenant_status_read_only, health=healthy, reachable=True, auth_configured=True, blocker=None, execution_enabled=False |

| `POST /api/bridge/hermes/test-chat` | yes | 503 | ok=False, mode=hermes_read_only_test_chat, hermes_called=False, blocker=hermes_safe_live_chat_adapter_not_configured, execution_enabled=False, writes_enabled=False |

| `GET /api/bridge/hermes/status` | no | 401 | error=Unauthorized |

| `POST /api/bridge/hermes/test-chat` | no | 401 | error=Unauthorized |

Adapter Decision

I did not wire Hermes through a CLI one-shot call. The available Hermes CLI one-shot mode can load tools and bypass approvals, so it does not satisfy the safe adapter requirement for this phase. No local HTTP chat endpoint was proven for a no-tool/no-write Hermes call. Therefore the correct production behavior is to keep the POST route blocked with hermes_safe_live_chat_adapter_not_configured.

Guardrails Confirmed

- `execution\_enabled:false`

- `writes\_enabled:false`
- No provider one-shot execution was run.
- No external writes were run.
- No raw shell, Docker socket, direct secret read, Zapier write, HeyGen generation, SMB/Fork 2, or farmer execution occurred.
- Unauthenticated protected routes return 401.
- OpenClaw+ remains the runtime / skills / agents / mini-agent execution layer.

Updated Hermes Status

System Status Percent
--- --- ---:
Hermes NO-GO live adapter 42%

Exact Next Step

Provide or implement a proven Hermes no-tool/no-write local chat API, or a Hermes mode that explicitly disables all tools, writes, provider-side execution tools, shell, Docker, and secret access. Until that exists, Mission Control must keep hermes_called:false.
