

day-08-spaceagent-firecrawl-closure

Day 08 - SpaceAgent Firecrawl 100% Closure

Date: 2026-05-10

Branch: to-knowledge-mc

Lane: SpaceAgent Firecrawl

Status: CREDENTIAL_GATED

Blocker class: CREDENTIAL_GATED

Objective

Close the developer-side Firecrawl lane without pretending Firecrawl is live.

Day 08 is considered developer-side closed because the readiness detector, UI truth surface, blocked action contract, tests, and proof harness are in place. Live Firecrawl execution remains gated by missing credential and missing backend SDK/adaptor.

Safety

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No broad crawl.
- No private page.
- No login.
- No writes.
- No external connector execution.
- Firecrawl remains a read-only readiness lane until credential/backend are approved and present.

Implementation

Firecrawl already had a truthful readiness contract. During Day 08, one adjacent SpaceAgent truth surface mismatch was fixed:

- '/api/gateway/space-agent/browser/status' now passes Firecrawl credential truth into the Space Agent browser automation payload.
- '/api/gateway/space-agent/browser/status' now passes the proven YouTube transcript connector truth into the same payload.
- The YouTube card no longer shows the stale 'youtube_transcript_connector_not_proven' blocker after Day 07 proof.

No Firecrawl execution path was enabled.

Files Changed

- 'src/app/api/gateway/space-agent/browser/status/route.ts'
- 'src/lib/space-agent-browser-automation.ts'
- 'src/lib/space-agent-browser-automation.test.ts'
- 'runtime/day-08-spaceagent-firecrawl-closure.md'
- 'runtime/day-08-spaceagent-firecrawl-closure.pdf'

Routes Proved

Authenticated with runtime API key context:

GET '/api/firecrawl/status'

Result:

- HTTP 200
- 'status': 'credential_required'
- 'state': 'CREDENTIAL_REQUIRED'

- 'canonical_status': 'CREDENTIAL_GATED'
- 'blocker_class': 'CREDENTIAL_GATED'
- 'blocked_reason': 'firecrawl_credential_required'
- 'blockers': 'firecrawl_credential_required', 'firecrawl_backend_adapter_not_configured'
- 'key_present': 'false'
- 'sdk_loaded': 'false'
- 'read_only_smoke_allowed': 'false'
- 'write_execution_enabled': 'false'
- 'broad_crawl_enabled': 'false'
- 'public_exposure': 'false'

GET '/api/gateway/space-agent/browser/status'

Result:

- HTTP 503 because Playwright MCP remains service-down from Day 06.
- Firecrawl card:
 - 'status': 'blocked'
 - 'blocker': 'firecrawl_credential_required'
 - 'configured': 'false'
 - 'connected': 'false'
 - 'public_exposure': 'false'
- YouTube card after Day 07:
 - 'blocker': 'null'
 - 'configured': 'true'
 - summary says the read-only transcript connector is proven.
- 'execution_enabled': 'false'
- 'writes_enabled': 'false'
- 'external_writes_enabled': 'false'
- 'no_public_exposure': 'true'

Tests And Checks

Passed:

- 'pnpm exec vitest run src/lib/space-agent-browser-automation.test.ts src/lib/firecrawl-status.test.ts src/lib/space-agent-routes.test.ts src/lib/space-agent-research.test.ts src/lib/space-agent-youtube-connector.test.ts'
- 'git diff --check'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'
- 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337 /api/firecrawl/status /api/gateway/space-agent/browser/status'
- 'node scripts/check-connector-readiness-live.mjs http://127.0.0.1:3337'
- 'node scripts/check-connector-action-contracts.mjs'
- 'node scripts/check-protected-file-invariants.mjs'

Test totals:

- Full suite: 171 files / 1357 tests passed.
- Targeted SpaceAgent/Firecrawl suite: 5 files / 44 tests passed.

Additional note:

- 'node scripts/check-viral-firecrawl-readiness.mjs http://127.0.0.1:3337' was not used as the Day 08 gate because it also asserts the separate Viral Crawl video wrapper lane. The Firecrawl half of its output matched the expected gated state.

Production Runtime

Local production runtime restarted from the rebuilt standalone bundle.

Runtime:

- Bind: '127.0.0.1:3337'
- PID after restart: 26160
- '/login': included in route-rendering smoke and returned 200.
- No new public exposure.

Blockers

Current exact blockers:

- 'firecrawl_credential_required'
- 'firecrawl_backend_adapter_not_configured'

Blocker classification:

- CREDENTIAL_GATED first, because the Mission Control runtime has no Firecrawl credential.
- SERVICE_DOWN/BACKEND missing remains secondary, because the Firecrawl SDK/backend adapter is also absent.

Owner/admin action package:

1. Provide 'FIRECRAWL_API_KEY' through the approved secret path.
2. Install or approve the Mission Control Firecrawl backend adapter/package.
3. Restart Mission Control after credential/package changes.
4. Re-run 'GET /api/firecrawl/status'.
5. Only if status becomes READY, run exactly one read-only smoke against 'https://example.com/'.
6. Keep broad crawl, private pages, login, writes, and Brain ingestion blocked until Bridge approval/audit exists.

Rollback

```
""bash
git revert <day08_commit_sha>
""
```

Closeout

Day 08 SpaceAgent Firecrawl is developer-side closed as CREDENTIAL_GATED.

Next day automatically started:

- Day 09 - Telegram owner command lane
