

Paperclip AgentHub ECO Routing Fix Report

Generated: 2026-05-14

Final Status

Status: PARTIAL GO

Paperclip is reachable and owner-facing AgentHub routing is now normalized to the owner-accessible

ECO comp

Root Cause Found

The Paperclip runtime was reachable, but Mission Control had stale Paperclip owner-facing routes in

multiple pla

- The static Paperclip detail page still showed the legacy `/gateway/agents/paperclip` route and old

root Paper

Files Changed

- `gateway-dropin/src/components/gateway/GatewayShell.tsx`

- `gateway`

Paperclip Button Behavior

| Button | Final behavior |

| --- | ---

JSON Endpoint Fixed

Paperclip readable pages now use JSON-backed status routes instead of trying to parse Paperclip HTML

- ``/api/paperclip/status``

Unauthenticated requests to protected API routes correctly return JSON ``401``, not an HTML page.

Routes Fixed

Normalized owner-facing Paperclip routes:

- ``/gateway/agent-hub/paperclip``

Legacy ``/gateway/agents/paperclip`` now normalizes to the Paperclip readable status control page

Old/Stale Route References Removed

Production grep confirmed no stale owner-facing references remained in the scoped Paperclip/Gateway

- ``/gateway/agents/paperclip``

Base health constants such as ``http://100.116.35.95:3100/api/health`` remain valid and are not owner

Production Smoke Results

Production host: ``100.116.35.95``

Mission Control restart:

- Previous PID: ``577586``

Route smoke:

- `http://127.0.0.1:3337/login` -> `200`

- `https://tk

Direct Paperclip ECO routes:

- `http://100.116.35.95:3100/ECO/dashboard` -> `200`

- `http://100

Validation

Local validation:

- `git diff --check` passed.

- `pnpm --c

Production validation:

- `git diff --check` passed.

- Production

Note: the production host does not currently include the local `safety:ui-actions` package script or

matching s

Secret Scan Result

No credential values, cookies, tokens, auth files, passwords, or invite URLs were added or printed.

The scoped diff contains policy words such as "token", "session", "cookies", and "Bridge Session"

only in exp

Write Policy

Paperclip writes remain Bridge-gated.

No Paperclip tasks were created. No Paperclip comments were created. No issues were modified. No

database r

Future Paperclip task writes still require:

- Bridge Session

- write ada

TOK Legacy Company State

TOK remains a separate legacy company blocker. This fix does not repair TOK and does not route

owner-faci

Owner-facing Paperclip routing now uses ECO only.

Rollback

Production backup before deployment:

```
`/tmp/mc-paperclip-eco-backup-20260514134238`
```

Rollback command:

```
sudo systemctl stop mission-control.service
```

cd /home/t

Owner Retest

Owner should hard refresh:

```
`https://tkmc.knowledge-vs-ai.com/gateway/agent-hub?refresh=paperclip-eco-20260514`
```

Then verify:

1. Paperclip card does not say `NOT INSTALLED`.

2. Papercli
