

Day 2 - Paperclip Owner Login / Session Bridge Report

Objective

Move Paperclip from degraded to live read-only service where possible, while proving local/Tailnet-only exposure, health, owner login, company dashboard, agent roster, task queue, and write gating.

Result

****PARTIAL / DEGRADED.**** Paperclip health is reachable on the Tailnet-only service, and the Mission Control bridge status route can see it. Owner login/session proof is still blocked.

Exact blockers:

Blocker	Meaning
`paperclip_owner_session_required`	Owner-authenticated Paperclip dashboard/session is required to prove login, dashboard, roster, and task queue visually.
`paperclip_auth_required_or_not_configured`	Mission Control can see Paperclip health, but Paperclip API inventory calls are not authorized/configured for read-only company/agent/issue data.
`paperclip_safe_test_task_adapter_not_configured`	The test-chat/task adapter is not live and must not fake a Paperclip call.

Updated Percentage

System	Previous	Current	Decision
Paperclip	62%	64%	PARTIAL / DEGRADED
Paperclip health	70%	75%	Tailnet-only `/api/health` proven
Paperclip owner login	0%	0%	BLOCKED by owner session
Paperclip Gateway bridge	62%	64%	Status route works; inventory/task routes blocked honestly

Actions

Action	Result
Start or verify Paperclip local/Tailnet-only mode	Verified Tailnet-only listener
Do not expose publicly	PASS, no public listener was added
Prove `/api/health`	PASS, Tailnet-only health returned HTTP 200
Prove owner login	BLOCKED, owner session required
Prove company dashboard	BLOCKED, owner session/API auth required
Prove agent roster	BLOCKED, owner session/API auth required
Prove task queue view	BLOCKED, owner session/API auth required
Keep writes blocked unless Bridge Session and adapter exist	PASS
Confirm Paperclip sits before OpenClaw+	PASS in Gateway role/chain

Commands And Routes Used

Command / Route	Purpose	Result
Process/listener check	Confirm Paperclip-related listeners are Tailnet/local only	PASS
`GET /api/health` on Paperclip Tailnet endpoint	Health proof	HTTP 200
`GET /api/bridge/paperclip/status` authenticated	Mission Control bridge status	HTTP 200
`GET /api/bridge/paperclip/status` unauthenticated	Auth protection	HTTP 401

```
| `GET /api/bridge/paperclip/companies` authenticated | Company dashboard data p
roof | HTTP 503, auth/config blocker |
| `GET /api/bridge/paperclip/agents` authenticated | Agent roster proof | HTTP 5
03, auth/config blocker |
| `GET /api/bridge/paperclip/issues` authenticated | Task queue / issue view pro
of | HTTP 503, auth/config blocker |
| `POST /api/bridge/paperclip/test-chat` authenticated | Safe task/chat adapter
proof | HTTP 503, adapter blocker |
| `POST /api/bridge/paperclip/workforce-flow` authenticated | Dry-run workforce
flow | HTTP 409, missing worker result before completion |
```

Proof

Paperclip health:

```
| Field | Value |
| --- | --- |
| HTTP status | 200 |
| status | `ok` |
| deployment mode | authenticated |
| bootstrap status | ready |
| bootstrap invite active | false |
```

Mission Control Paperclip bridge status:

```
| Field | Value |
| --- | --- |
| `ok` | true |
| mode | `paperclip_status_read_only` |
| health | degraded |
| reachable | true |
| configured | true |
| service exposure | Tailnet-only |
| public exposure | false |
| writes enabled | false |
| execution enabled | false |
| protected actions enabled | false |
| blocker | `paperclip_auth_required_or_not_configured` |
```

Gateway inventory routes:

```
| Route | HTTP | Decision |
| --- | ---: | --- |
| `/api/bridge/paperclip/companies` | 503 | Blocked by Paperclip auth/config |
| `/api/bridge/paperclip/agents` | 503 | Blocked by Paperclip auth/config |
| `/api/bridge/paperclip/issues` | 503 | Blocked by Paperclip auth/config |
```

Unauthenticated Paperclip bridge routes returned HTTP 401, so the Mission Control bridge remains protected.

Files Changed

```
| File | Change |
| --- | --- |
| `runtime/day-02-paperclip-owner-login-report.md` | Added this report |
| `runtime/day-02-paperclip-owner-login-report.pdf` | Generated PDF report |
```

No application code was changed in this phase.

Tests

```
| Test | Result |
```

```
| --- | --- |  
| Tailnet-only health route | PASS |  
| Mission Control authenticated status bridge | PASS |  
| Mission Control unauthenticated status bridge | PASS, HTTP 401 |  
| Company dashboard proof | BLOCKED |  
| Agent roster proof | BLOCKED |  
| Task queue proof | BLOCKED |  
| Write/execution gating | PASS, writes/execution false |  
| Secret exposure check | PASS |  
| `.env` modification check | PASS |
```

Services

```
| Service | State |  
| --- | --- |  
| Paperclip Tailnet service | Health reachable |  
| Mission Control Paperclip bridge | Status route reachable |  
| Paperclip owner session | Not available to Codex |  
| Paperclip mutation adapter | Not enabled |
```

Blockers

```
| Blocker | Impact | Exact Next Step |  
| --- | --- | --- |  
| `paperclip_owner_session_required` | Cannot prove owner login, dashboard, roster, or task queue visually | Owner completes or exposes an approved owner-authenticated Paperclip session bridge |  
| `paperclip_auth_required_or_not_configured` | Mission Control cannot read Paperclip company/agent/issue inventory | Configure a read-only Paperclip API/session token through the approved secret path |  
| `paperclip_safe_test_task_adapter_not_configured` | Paperclip test-chat cannot be claimed live | Build a safe no-write Paperclip adapter after read-only auth is approved |
```

Rollback

No code or service behavior changed in this phase. Rollback is not required. If this report needs removal, revert the report-only commit that adds it.

No-Secrets Confirmation

No Paperclip session token, auth file, API key, cookie, or `.env` value was printed or committed.

Final Decision

Paperclip remains ****PARTIAL / DEGRADED****. Health is proven, Gateway status is protected and reachable, and writes remain disabled, but owner login and read-only inventory are blocked by owner session/auth configuration.
