

day-10-bridge-approvals-100-closure

Day 10 - Bridge Session Approvals 100% Closure

Date: 2026-05-09

Status: DEVELOPER-SIDE CLOSED, SERVICE_DOWN FOR LIVE DISPATCH

Decision: PARTIAL GO. Bridge approval lifecycle is implemented, tested, persisted, and audited. The approved Build-Wiki/Farmer Run Now dispatch was accepted for execution, but this runtime host cannot complete it because 'systemctl' is not available.

Lane

Bridge Session approvals and one safe scoped execution path:

- action: 'buildwiki.run_now'
- target service: 'opencloud-docs-farmer.service'
- scope: Fork 1 only
- blocked: SMB, Fork 2, external farmers, second vault

What Was Implemented

- Added migration '054_bridge_connector_run_persistence'.
- Added 'bridge_connector_runs' persistence for dispatch attempts/results.
- Added Bridge approval lifecycle helper:
 - pending to approved
 - pending to denied
 - pending to expired when expired before decision
 - audit event for approval decisions
 - no execution during approval/denial
- Changed Mission Control approval routes from Telegram-only stubs to owner-gated API state transitions:
 - 'POST /api/bridge/approval-requests/:id/approve'
 - 'POST /api/bridge/approval-requests/:id/deny'
- Rewired Build-Wiki Run Now:
 - 'POST /api/bridge/brain-sync/build-wiki/run-now' creates a scoped approval request.
 - It does not execute immediately.
 - It writes an 'approval_requested' audit event.
 - It returns 'Request run -> Approval pending' state.
- Confirmed dispatch route:
 - only accepts approved 'buildwiki.run_now'
 - only targets 'opencloud-docs-farmer.service'
 - returns 'accepted_for_execution=true' after exact-scope approval
 - writes run/audit records
 - blocks outside-scope approval ids

Files Changed

- 'src/lib/migrations.ts'
- 'src/lib/bridge-approval-lifecycle.ts'
- 'src/lib/bridge-approval-lifecycle.test.ts'
- 'src/lib/build-wiki-run-now.ts'
- 'src/app/api/bridge/approval-requests/[id]/approve/route.ts'
- 'src/app/api/bridge/approval-requests/[id]/deny/route.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/run-now/route.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/run-now/route.test.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/run-now/[id]/dispatch/route.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/run-now/[id]/dispatch/route.test.ts'

Routes / Endpoints Changed

- 'POST /api/bridge/approval-requests/:id/approve'
- updates pending approval to 'approved'

- writes 'bridge_audit_events' outcome 'approved'
- does not execute by itself
- 'POST /api/bridge/approval-requests/:id/deny'
- updates pending approval to 'denied'
- writes 'bridge_audit_events' outcome 'denied'
- keeps protected action non-executable
- 'GET /api/bridge/brain-sync/build-wiki/run-now'
- reads local persisted Run Now approval/run state
- 'POST /api/bridge/brain-sync/build-wiki/run-now'
- creates exact-scope approval request
- writes audit event
- does not execute
- 'GET /api/bridge/brain-sync/build-wiki/run-now/:id'
- reads exact approval/run status
- 'POST /api/bridge/brain-sync/build-wiki/run-now/:id/dispatch'
- accepts only approved exact-scope 'buildwiki.run_now'
- starts only 'opencloud-docs-farmer.service'
- records run and audit
- blocks unrelated approval ids

UI Behavior

The backend now supports the expected Run Now UI states:

- Request run
- Approval pending
- Approved / ready to dispatch
- Dispatching
- Completed
- Failed

No fake completion state was introduced. The live runtime proof ended in 'failed' because the host cannot run 'systemctl'.

Service / Runtime Behavior

Standalone loopback runtime:

- PID: 25390
- Bind: '127.0.0.1:3337'
- Public exposure: none added
- '/login': 200
- Migration applied: 'bridge_connector_runs' table present

Runtime proof:

1. Unauthenticated Run Now read:
 - 'GET /api/bridge/brain-sync/build-wiki/run-now'
 - result: 401
2. Authenticated Run Now read:
 - result: 200
 - 'persistence_ready=true'
 - 'ui_state=idle'
 - 'execution_enabled=false'
3. Create Run Now approval:
 - result: 201
 - 'approval_request_created=true'

- 'approval_state=pending'
 - 'target_service=opencloud-docs-farmer.service'
 - 'accepted_for_execution=false'
4. Approve Run Now approval:
- result: 200
 - 'approval_state=approved'
 - audit event written
 - still 'accepted_for_execution=false' because approval alone does not execute
5. Dispatch approved exact-scope request:
- result: 502
 - 'accepted_for_execution=true'
 - 'execution_enabled=true'
 - 'run_state=failed'
 - audit event written
 - blocker: 'systemctl' unavailable on this host runtime
6. Read after dispatch attempt:
- result: 200
 - 'ui_state=failed'
 - run row exists
 - audit row exists
7. Outside-scope dispatch:
- created unrelated 'agentmail.send' approval
 - denied it
 - attempted Build-Wiki dispatch with that approval id
 - result: 422 'approval_request_out_of_scope'
 - 'execution_enabled=false'

Tests Run

- 'pnpm test src/lib/bridge-approval-lifecycle.test.ts src/app/api/bridge/brain-sync/build-wiki/run-now/route.test.ts src/app/api/bridge/brain-sync/build-wiki/run-now/[id]/dispatch/route.test.ts'
- PASS: 3 files / 8 tests
- 'pnpm run typecheck'
- PASS
- 'git diff --check'
- PASS
- 'pnpm run build'
- PASS
- 'pnpm test'
- PASS: 142 files / 1272 tests
- 'node scripts/check-protected-file-invariants.mjs'
- PASS
- 'MISSION_CONTROL_API_KEY=codex-local-route-smoke-key node scripts/check-protected-actions-lock ed.mjs http://127.0.0.1:3337'
- PASS: 11 protected-action probes
- Staged secret scan
- PASS
- '.env' diff check
- clean

Proof Artifact

This report and PDF:

- 'runtime/day-10-bridge-approvals-100-closure.md'
- 'runtime/day-10-bridge-approvals-100-closure.pdf'

Remaining Blocker

Blocker classification: SERVICE_DOWN

Exact blocker:

- 'buildwiki_run_now_host_systemctl_unavailable'

Reason:

- The current proof host does not provide 'systemctl', so 'systemctl --user start opencloud-docs-farmer.service' cannot complete here.
- The route still proved exact-scope acceptance, failed execution state, run persistence, audit persistence, and no fake completion.

Owner/admin action if this is production Linux:

1. Ensure the Mission Control service user can execute:
 - 'systemctl --user start opencloud-docs-farmer.service'
2. Ensure the user service exists:
 - 'opencloud-docs-farmer.service'
3. Ensure the timer remains configured if required:
 - 'opencloud-docs-farmer.timer'
4. Re-run one approved Run Now dispatch proof.

Commit / Push

Code commit:

- '3cd524e'

Push:

- pushed to 'origin/to-knowledge-mc'

Rollback

```
""bash
git revert 3cd524e
""
```

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public exposure.
- No SMB mounted.
- No Fork 2 enabled.
- No external farmers enabled.
- No second vault created.
- No Zapier write.
- No HeyGen generation.
- No fake Done.
- No fake completion.
- Out-of-scope action blocked.
- Only literal legacy service name used: 'opencloud-docs-farmer.service'.

Next Day Started

Day 11 - Dispatcher Core 100% Closure starts next.
