

Phase 4 — SpaceAgent Live Read-Only Research Flow

Generated: 2026-05-07T22:42:58Z

Result

Status: PARTIAL / PRODUCTION RESTART BLOCKED

Exact blocker: `mission\_control\_admin\_restart\_required`

A narrow SpaceAgent production slice was implemented, tested, committed, and pushed so safe public webpage research can collect Playwright MCP read-only browser evidence and attach it to the SpaceAgent ResearchPacket. Production Mission Control is still running the pre-restart process, so the new ResearchPacket evidence behavior is not loaded in production yet.

Code Change

Item	Result
---	---
Commit	`7dba45a feat(space-agent): collect read-only browser research evidence`
Scope	Safe public webpage reads only
Tool used	Playwright MCP local-only browser evidence packet
Firecrawl execution	not run
YouTube transcript execution	not run
External writes	none
Bridge Session bypass	no
Public service exposure	no

The change keeps protected cases gated: Firecrawl, YouTube, login/authenticated pages, private pages, paywalls, captcha, submit/form/upload, private network targets, and local URLs are not auto-executed by this read-only path.

Validation Before Push

Check	Result
---	---
`git diff --check`	pass
`pnpm run typecheck`	pass
`pnpm run build`	pass
`pnpm test -- src/lib/space-agent-research.test.ts src/lib/space-agent-end-to-end-research-flow.test.ts src/lib/space-agent-health.test.ts` pass; test runner executed 133 files / 1,237 tests, all passed	
Staged secret scan	pass
`.env` changes	none

Production Restart Proof

```
| Check | Result |
| --- | --- |
| `systemctl restart mission-control.service` | blocked |
| Blocker text | `Interactive authentication required` |
| `sudo -n systemctl restart mission-control.service` | blocked |
| Service active | yes |
| MainPID | `2121865` |
| ActiveEnterTimestamp | `Thu 2026-05-07 18:15:50 EDT` |
| Running production route loaded new code | no |
```

Current Production Route Proof

Authenticated production route checks after the restart block:

```
| Route | Result |
| --- | --- |
| `POST /api/bridge/playwright-mcp/smoke` against `https://example.com/` | HTTP 200 / passed |
| Playwright MCP service status | `connected_local_only` |
| Snapshot available | yes |
| Screenshot available | yes |
| Public exposure | no |
| `POST /api/gateway/space-agent/research` public webpage request | HTTP 200 |
| Research performed in production response | no, because service restart is blocked |
| Evidence count in production response | 0 |
| Citation count in production response | 0 |
| Recommended next agent | `hermes` |
| No secrets exposed | yes |
| Raw paths exposed | no |
```

Intended Flow Status

```
| Flow Stage | Status |
| --- | --- |
| Owner request to Gateway | route exists |
| Pi recommendation | represented in Gateway route model / contract tests |
| Agent Zero approval | represented in SpaceAgent route model / contract tests |
| SpaceAgent research through Playwright MCP | code implemented; production smoke for Playwright MCP passes |
| ResearchPacket with browser evidence | implemented in commit `7dba45a`; not production-loaded until restart |
| Gateway return to responsible agent | represented in packet model; production route returns `hermes` as next agent |
```

| Hermes workflow plan only | represented in contract tests; no live Hermes execution here |
| External writes/uploads/sends | not run |

Security / Governance Confirmation

- No secrets were printed or committed.
- No `.env`` file was modified.
- No local UI or Playwright MCP service was exposed publicly.
- No Zapier write, HeyGen generation, SMB/Fork 2, Farmer execution, email send, upload, or connector write occurred.
- Firecrawl remained blocked from Phase 2.
- YouTube remained limited from Phase 3.
- OpenClaw+ naming remains the runtime/skills/agents layer in owner-facing interpretation.

Updated Percentages

System	Previous	Current	Notes
Playwright MCP	90%	92%	Safe public-page smoke passed with snapshot/screenshot and local-only service.
SpaceAgent Browser Automation	66%	72%	Code can attach read-only browser evidence, but production restart is blocked.
Gateway / Agent Hub	72%	74%	Backend readiness improved; owner-auth visual proof and restart remain blockers.
Firecrawl	25%	25%	Still blocked by credential/backend.
YouTube Research	45%	45%	Still limited by missing transcript connector.

Required Action

Admin restart is required to load commit ``7dba45a`` into production Mission Control. After restart, rerun the authenticated SpaceAgent research route and confirm:

- ``research_performed:true``
- evidence count greater than 0
- citation count greater than 0
- recommended next agent ``hermes``
- no external writes
- no secrets or raw paths

Phase 4 Decision

SpaceAgent live read-only research is **code-complete and tested**, but production proof is **blocked** until Mission Control is restarted through approved admin authorization.
