

Paperclip Final Integration Report

Generated: 2026-05-07

Executive Summary

Paperclip is integrated into Mission Control Gateway as a read-only, policy-gated Workforce Operations Layer. It is visible in Gateway and available to Agent Zero, Hermes, Pi, and SpaceAgent through bridge contracts and dry-run payloads. It is not live for workforce operations yet because the Paperclip service is currently inactive.

Final status: PARTIAL GO for read-only Gateway integration. NO-GO for live Paperclip operations until sandbox service, health, Tailnet UI, and owner login are proven again.

Current Percentages

- Paperclip research/integration design: 90%.
- Paperclip sandbox install: 75%.
- Paperclip owner access: 60%.
- Paperclip Gateway bridge contracts: 85%.
- Paperclip live workforce operations: 25%.
- Overall Paperclip Gateway readiness: 68%.

What Passed

- Paperclip is modeled as a Gateway workforce node.
- Paperclip does not replace Agent Zero, Hermes, Pi, SpaceAgent, OpenCloud, OpenClaw+, or existing agents.
- Agent Zero remains commander.
- Hermes remains lieutenant and skill/workflow builder.
- Pi remains dispatcher candidate in shadow/advisory mode.
- SpaceAgent remains web/browser/YouTube/Firecrawl research specialist.
- Paperclip routes are protected by Mission Control auth in tests.
- Paperclip mutation flows are blocked without Bridge Session and write adapter.
- Paperclip co-worker schema and policy gates are modeled.
- Paperclip task, proposal, dispatcher, research, and workforce-flow payloads are owner-safe.
- 1,000 deterministic Paperclip routing scenarios passed.
- Full Mission Control validation passed.

What Failed Or Remains Blocked

- Paperclip service is inactive.
- Paperclip local health endpoint is not reachable.
- Paperclip Tailnet UI is not reachable right now.
- Owner login is not fully proven.
- Paperclip write adapter is not configured.
- Persistent Paperclip service is not enabled.
- Paperclip production workforce execution is not approved.

Test Results

- git diff --check: passed.
- pnpm run typecheck: passed.

- pnpm run build: passed.
- pnpm test: passed.
- Full suite: 131 test files and 1,230 tests passed.
- Focused Paperclip tests: passed.
- Paperclip routing gauntlet: 1,000 scenarios, zero failures.

Service Status

- Mission Control: active.
- ClaudeClaw/OpenClaw+: active.
- Hermes gateway: active.
- Build-Wiki/Farmer timer: active.
- Agent Zero container: running.
- Paperclip: inactive.

Security Confirmation

- No secrets exposed.
- No .env changes.
- No auth weakening.
- No public Paperclip exposure.
- No external writes.
- No Zapier writes.
- No HeyGen generation.
- No SMB mount.
- No external farmer execution.
- No raw root shell.
- No Docker socket.
- No direct secret reads.

Rollback

Rollback the final Paperclip report/gauntlet closure with:

```
bash
git revert 60a4bb9
```

Rollback earlier Paperclip Gateway commits in reverse order only if needed:

```
bash
git revert c8ca7e9
git revert dfb65a4
```

```
git revert cd18aec
```

Exact Next Step

Start Paperclip in sandbox-only local/Tailnet mode, prove /api/health, prove Tailnet UI and owner login, then rerun the Gateway Paperclip live smoke before enabling any persistent service or write adapter.
