#Executive Summary

Owner correction accepted and applied: OpenClaw+ is the runtime / skills / adapters / reports / governance / agent execution layer. Paperclip remains the workforce / task / co-worker orchestration layer before OpenClaw+. Build-Wiki / Farmer is treated as a scoped worker/docs sync service under OpenClaw+.

The active Gateway model no longer creates an OpenCloud architecture node. Remaining 'opencloud-docs-farmer.*' strings are legacy systemd unit names only and are preserved intentionally.

#What Changed

â€¢ Removed OpenCloud from the canonical Gateway hierarchy, Agent Hub runtime node list, Gateway role matrix, Gateway node kinds, docs coverage, mini-agent gauntlet policy, and Paperclip adapter naming.

â€¢ Promoted OpenClaw+ / ClaudeClaw to the runtime engine node type in Gateway.

â€¢ Replaced owner-facing runtime wording with OpenClaw+ / Build-Wiki / Farmer language.

â€¢ Preserved the literal legacy units 'opencloud-docs-farmer.service' and 'opencloud-docs-farmer.timer' for command/status reporting only.

â€¢ Updated Gateway registry status from 'buildwiki_opencloud' to 'buildwiki_openclaw'.

â€¢ Updated Paperclip adapter naming from OpenCloud worker adapter to OpenClaw+ runtime adapter.

#Files Updated

â€¢ 'src/lib/agent-network-hierarchy.ts'

â€¢ 'src/lib/gateway-model.ts'

â€¢ 'src/lib/gateway-registry-api.ts'
