## # Day 81 - Multi-Agent Proof Packet

Status: PASS for developer-side proof packet closure

Blocker class: NONE for this lane

### ## Lane

Generate one canonical proof packet covering Agent Zero, Hermes, Pi, Paperclip, SpaceAgent, and OpenClaw+ with timestamp, runtime commit, checked route/service, result, blocker, audit pointer, safe log pointer, and rollback command.

### ## What Was Implemented

- Added a shared multi-agent proof packet builder.
- Added authenticated 'GET /api/gateway/agent-hub/proof-packet'.
- Added 'multi\_agent\_proof\_packet' to 'GET /api/gateway/agent-hub/status'.
- Added CloudCode health ids to each Agent Hub agent row so proof packets can bind each card to its backend truth rows.
- Added route-smoke coverage for the new proof-packet endpoint.
- Added tests proving the packet contains all six canonical agents, keeps blocked backend truth separate from ready advisory truth, and does not expose secret-shaped or raw-path text.

### ## Files Changed

- 'src/lib/multi-agent-proof-packet.ts'
- 'src/lib/multi-agent-proof-packet.test.ts'
- 'src/lib/gateway-agent-hub.ts'
- 'src/app/api/gateway/agent-hub/status/route.ts'
- 'src/app/api/gateway/agent-hub/proof-packet/route.ts'
- 'scripts/protected-route-smoke-contract.mjs'
- 'src/lib/protected-route-smoke-contract.test.ts'
- 'runtime/day-81-multi-agent-proof-packet-proof.json'
- 'runtime/day-81-multi-agent-proof-packet.md'
- 'runtime/day-81-multi-agent-proof-packet.pdf'

### ## Routes Changed

- 'GET /api/gateway/agent-hub/proof-packet' was added.
- 'GET /api/gateway/agent-hub/status' now includes 'multi\_agent\_proof\_packet'.

### ## UI Behavior

No Gateway designer HTML, CSS, class names, or visual assets were modified.

Mission Control and Agent Hub can now read one aggregate proof packet that includes:

- one proof packet per canonical agent
- route/service checked
- owner-facing result
- blocker and blocker class
- audit pointer
- safe log pointer
- CloudCode health row ids
- rollback command
- no execution, writes, or external writes enabled

### ## Service / Runtime Behavior

Runtime proof used a short-lived local-only standalone Mission Control runtime bound to '127.0.0.1:3337'. The proof server was started only for smoke verification and was shut down by the proof script.

No external writes were enabled. No Bridge action was executed. No '.env' file was changed. No A  
PI key was printed.

## ## Tests And Checks

- 'pnpm vitest run src/lib/multi-agent-proof-packet.test.ts src/lib/agent-status-consistency.test.ts src/lib/gateway-agent-hub.test.ts src/lib/protected-route-smoke-contract.test.ts --reporter=dot': PASS, 4 files, 17 tests
- 'pnpm run typecheck': PASS
- 'pnpm run build': PASS
- 'pnpm test': PASS, 201 files, 1493 tests
- 'git diff --check': PASS
- 'node scripts/check-protected-file-invariants.mjs': PASS
- 'node scripts/secret-scan-contract.mjs': PASS
- 'node scripts/raw-exposure-scan-contract.mjs': PASS
- '.env' diff check: clean
- protected route smoke: PASS, 42 routes, 0 failures
- local authenticated proof-packet smoke: PASS, 6 packets, 0 consistency issues

## ## Proof

Proof artifact: 'runtime/day-81-multi-agent-proof-packet-proof.json'

Observed packet ids:

- Paperclip
- Agent Zero
- Hermes
- SpaceAgent
- Pi
- OpenClaw+

Observed proof flags:

- consistency ok: true
- consistency issues: 0
- execution enabled: false
- writes enabled: false
- external writes enabled: false
- secrets exposed: false
- raw paths exposed: false

## ## Remaining Blockers

No Day 81 proof-packet blocker remains.

The following individual agent blockers remain truthful and are carried into later lanes:

- 'agent\_zero\_external\_api\_key\_missing'
- 'hermes\_not\_installed'
- 'paperclip\_sandbox\_service\_not\_running'
- 'playwright\_mcp\_service\_unreachable'
- 'firecrawl\_credential\_required'
- 'openclaw\_doctor\_runtime\_not\_reachable'

Blocker classification for Day 81: NONE

## ## Rollback

After commit:

```
""bash
git revert <day-81-multi-agent-proof-packet-commit>
""
```

## Commit / Push

Pending at report generation time.

## Next Day

Day 82 - Agent Integration Final Closeout automatically starts after this lane closes.
