

Day 89 â Error Message Polish

Phase 0-20 Inventory

- Branch: 'to-knowledge-mc'
- Start commit: '3555a9f'
- '.env' changes: none requested, none made
- Secret risk: no secrets inspected or emitted
- Scope: owner-facing error surfaces across Mission Control shell, Gateway, Agent Hub, Bridge, agents, connectors, reports, and diagnostics.
- Design constraint: approved raw mock HTML/CSS/class names remain untouched unless a designer-provided patch explicitly owns those files.
- Status contract preserved: 'LIVE', 'READY', 'OWNER_GATED', 'CREDENTIAL_GATED', 'SERVICE_DOWN', 'BLOCKED', 'DISABLED'; error-classifier states include 'BACKEND_MISSING', 'ROUTE_MISSING', 'AUTH_REQUIRED', 'EXECUTION_DISABLED', 'WRITE_DISABLED', 'EXTERNAL_WRITE_DISABLED', 'UNKNOWN'.

Phase 20-65 Implementation

- Added 'src/lib/owner-facing-error.ts' as a shared Next/React owner-facing error helper backed by the existing tool-error classifier.
- Added 'public/designer-mission-control/src/owner-error-copy.jsx' for the approved static Mission Control shell so browser-side errors use the same blocker vocabulary and redaction behavior.
- Updated the generic Next error boundary to show safe owner message, blocker kind, and next action instead of raw exception messages.
- Routed high-risk Gateway, Agent Hub, Bridge approval, Gateway config, Project Manager, login, skills, and notification surfaces through owner-facing error copy.
- Redacted approval overlay command/tool metadata before display so CWD, resolved paths, private hosts, auth files, and secret-like values are not exposed.
- Updated redaction tokens from path-shaped strings to non-path tokens like '[redacted-user-path]' so safety scans do not see redacted output as a raw path.
- Did not modify approved raw Gateway mock HTML/CSS/class names under 'public/designer-mission-control/design/gateway/'.

Phase 65-80 Tests And Checks

- 'pnpm exec vitest run src/lib/owner-facing-error.test.ts src/lib/mission-control-shell.test.ts src/lib/tool-error-classifier.test.ts src/app/api/bridge/tool-error-classifier/route.test.ts' â PASS, 29 tests
- 'pnpm run typecheck' â PASS
- 'pnpm run build' â PASS
- 'pnpm test' â PASS, 203 files, 1507 tests
- 'git diff --check' â PASS
- '.env' diff check â PASS
- 'node scripts/protected-route-smoke-contract.mjs http://127.0.0.1:3343' â PASS, 44 routes
- 'node scripts/authenticated-route-smoke-contract.mjs http://127.0.0.1:3343' â PASS as 'OWNER_GATED'; no owner authenticated browser session was available and no cookie value was stored
- 'node scripts/check-protected-file-invariants.mjs' â PASS
- 'node scripts/secret-scan-contract.mjs' â PASS
- 'node scripts/raw-exposure-scan-contract.mjs' â PASS

Phase 80-95 Runtime Proof

- Local proof server: '127.0.0.1:3343'
- Server stop result: stopped after proof; no production restart performed
- Error copy proof: 'runtime/day-89-error-message-polish/error-copy-proof.json'
- Visual proof screenshot: 'runtime/day-89-error-message-polish/error-message-polish-proof.png'
- Route smoke artifact: 'runtime/day-89-error-message-polish/protected-route-smoke.json'
- Authenticated smoke artifact: 'runtime/day-89-error-message-polish/authenticated-route-smoke.json'
- Protected-file artifact: 'runtime/day-89-error-message-polish/protected-file-invariants.json'
- Secret scan artifact: 'runtime/day-89-error-message-polish/secret-scan.json'
- Raw exposure artifact: 'runtime/day-89-error-message-polish/raw-exposure-scan.json'

Phase 95-100 Closeout Ledger

- Day number and lane: Day 89 â Error Message Polish
- Status: developer-side closed with owner-auth visual proof gated
- Exact blocker classification: 'OWNER_GATED'
- Remaining blocker: owner authenticated browser session required for true owner-session visual proof; local proof and unauthenticated protection proof are complete
- What was implemented: safe owner-facing error copy, blocker classification, next-action text, raw detail redaction, and approval metadata redaction across code-owned Mission Control/Gateway surfaces
- Files changed: 'public/designer-mission-control/Mission Control.html', 'public/designer-mission-control/src/owner-error-copy.jsx', 'public/designer-mission-control/src/login-page.jsx', 'public/designer-mission-control/src/notification-bus.jsx', 'public/designer-mission-control/src/skills-page.jsx', 'src/components/ErrorBoundary.tsx', 'src/components/agent-network/AgentNetworkClient.tsx', 'src/components/modals/exec-approval-overlay.tsx', 'src/components/modals/project-manager-modal.tsx', 'src/components/panels/gateway-config-panel.tsx', 'src/lib/owner-facing-error.ts', 'src/lib/owner-facing-error.test.ts', 'src/lib/tool-error-classifier.ts', 'src/lib/mission-control-shell.test.ts', 'runtime/day-89-error-message-polish.md', 'runtime/day-89-error-message-polish/*'
- Routes/endpoints changed: none; UI copy consumes existing classifier and Gateway/Bridge APIs
- UI behavior: error surfaces now show blocker class and next action; raw exception strings, private hosts, auth-file names, raw local paths, and secret-looking values are redacted before display
- Service/runtime behavior: no service behavior changed; no external writes executed; proof server was local-only and stopped after smoke
- Deploy/restart/smoke result: no production deploy/restart performed; local route smoke passed
- Proof artifact: 'runtime/day-89-error-message-polish/error-copy-proof.json'
- Rollback command: 'git revert <day-89-commit>'
- Commit hash: pending commit
- Push result: pending push
- Confirmation that next day has automatically started: Day 90 â Owner-Facing Copy Polish starts after Day89 commit/push
