

Day 07 Phase 1 â Day 06 Commit, Push, and Deploy Closeout

Objective

Ship-close Day 06 Bridge persistence work and verify production runtime state before Day 07 implementation.

Result

PASS (closeout with fresh runtime smoke evidence).

Key Outcome

Day 06 was already committed and pushed before this phase began:

- 'ed7b11c' on 'origin/to-knowledge-mc'
- includes Bridge persistence migration '053_bridge_approval_audit_persistence'

This phase completed deployment/state verification and smoke checks on the active runtime.

Actions Executed

1. Verified branch/HEAD state against required shipped commits:
 - 'ec9c891'
 - 'b209cb1'
 - 'ed7b11c'
2. Confirmed local runtime listener is active and bound to '127.0.0.1:3337' only.
3. Verified protected Gateway FULL v3 pages still redirect unauthenticated access to '/login'.
4. Executed authenticated smoke (session-authenticated) for required Phase 1 API routes:
 - 'GET /api/bridge/agent-zero/bridge-session'
 - 'POST /api/bridge/agent-zero/execute'
 - 'GET /api/bridge/agent-zero/telegram/status'
 - 'GET /api/gateway/space-agent/youtube/status'
5. Executed unauthenticated smoke for the same API routes and confirmed '401'.
6. Confirmed '.env' diff remains clean.
7. Confirmed no new public local exposure (local-only bind).
8. Confirmed no secret values were printed in command outputs/log snippets used for this report.

Commands and Route Proof

- Commit/lineage checks:
 - 'git rev-parse --short HEAD' -> 'ed7b11c'
 - 'git rev-parse --short origin/to-knowledge-mc' -> 'ed7b11c'
 - 'git merge-base --is-ancestor ec9c891 origin/to-knowledge-mc' -> 'OK'
 - 'git merge-base --is-ancestor b209cb1 origin/to-knowledge-mc' -> 'OK'
 - 'git merge-base --is-ancestor ed7b11c origin/to-knowledge-mc' -> 'OK'
- Runtime listener:
 - 'lsof -nP -iTCP:3337 -sTCP:LISTEN'
 - observed 'node' listening on '127.0.0.1:3337'
- Protected page checks (unauthenticated):
 - '/gateway' -> '307 /login'
 - '/gateway/routes' -> '307 /login'
 - '/gateway/registry' -> '307 /login'
 - '/gateway/policies' -> '307 /login'
 - '/gateway/health' -> '307 /login'
 - '/gateway/dispatcher' -> '307 /login'
 - '/gateway/token-governor' -> '307 /login'
 - '/gateway/agent-hub' -> '307 /login'
 - '/designer-mission-control/design/gateway/index.html' -> '307 /login'
- Authenticated smoke evidence file:
 - 'runtime/day-07-phase-1-auth-smoke.json'
 - statuses:
 - 'GET /api/bridge/agent-zero/bridge-session' -> '200'
 - 'POST /api/bridge/agent-zero/execute' -> '400' (expected blocked execution contract; no fake success)
 - 'GET /api/bridge/agent-zero/telegram/status' -> '200' (blocked/gated status payload)
 - 'GET /api/gateway/space-agent/youtube/status' -> '200' (limited status payload)
- Unauthenticated smoke evidence file:

- 'runtime/day-07-phase-1-unauth-smoke.json'
- all required protected routes returned '401'

Files Changed

- 'runtime/day-07-phase-1-day06-commit-push-deploy.md'
- 'runtime/day-07-phase-1-day06-commit-push-deploy.pdf'
- 'runtime/day-07-phase-1-auth-smoke.json'
- 'runtime/day-07-phase-1-unauth-smoke.json'
- 'runtime/day-07-phase-1-gateway-route-check.json'

Services

- Mission Control runtime: active on '127.0.0.1:3337'
- Current runtime PID observed: '5517'

Tests

Not rerun in this closeout phase (Day 06 already passed typecheck/build/tests).
This phase focused on commit/push/deploy-state proof and production smoke.

Blockers

None for Day 07 Phase 1 closeout itself.

Commits

- No new source commit required in this phase.
- Day 06 shipped commit confirmed: 'ed7b11c'.

Rollback

If Day 06 persistence change must be reverted:
- 'git revert ed7b11c'

No-Secrets Confirmation

Confirmed:

- no API key/token values printed,
- no auth file contents printed,
- ephemeral cookie artifact removed after smoke run,
- '.env' unchanged.

Updated Percentage

Overall remains low 90s PARTIAL GO (no 100% claim).

Exact Next Step

Proceed to Day 07 Phase 2: Bridge approved scoped execution proof (or exact owner-approval action package if approval/session is unavailable).
