

Phase 9 — OpenClaw+ Health Repair Report

Generated: 2026-05-07T23:20:14Z

Result

Status: PARTIAL / STILL UNHEALTHY

One confirmed security hygiene issue was repaired by tightening the OpenClaw+ config permissions, but OpenClaw+ doctor still reports remaining state/auth/plugin issues that require targeted follow-up. I did not run the broad doctor fix because it can mutate sessions and state beyond this phase.

Service Proof

```
| Check | Result |
| --- | --- |
| `claudeclaw.service` active | `active` |
| MainPID | `1287` |
| ActiveEnterTimestamp | `Wed 2026-05-06 22:37:41 EDT` |
```

Safe Repair Applied

```
| Repair | Result |
| --- | --- |
| Tightened OpenClaw+ config permissions | `644 -> 600` |
| Current config permission mode | `600` |
| Group/world-readable config issue still present | `False` |
| Broad `openclaw doctor --fix` route run | `false` |
| Session cleanup / orphan transcript mutation run | `false` |
```

Post-Repair Doctor Proof

```
| Check | Result |
| --- | --- |
| Doctor `level` | `error` |
| Doctor `category` | `state` |
| Doctor `healthy` | `False` |
| Doctor `summary` | `plugins.entries.github-copilot: plugin disabled (bundled (disabled` |
| Doctor `canFix` | `True` |
| Doctor issue count | `17` |
| Authenticated doctor HTTP | `200` |
```

Remaining Unhealthy Items

- plugins.entries.github-copilot: plugin disabled (bundled (disabled
- plugins.entries.huggingface: plugin disabled (bundled (disabled by
- channels.telegram: channel is configured, but plugin "telegram" is
- Binary: ~/.nvm/versions/node/v24.14.1/bin/claude.
- Headless Claude auth: OK (oauth).
- OpenClaw auth profile: missing (anthropic:claude-cli) in
- Workspace: ~/.openclaw/workspace (writable).
- Claude project dir:
- Fix: run openclaw models auth login --provider anthropic --method
- Found 1 agent directory on disk without a matching agents.list
- 3/3 recent sessions are missing transcripts.
- claudeclaw.service (user, unit:
- openclaw-health.service (user, unit:
- systemctl --user disable --now openclaw-gateway.service
- rm ~/.config/systemd/user/openclaw-gateway.service
- plugins.entries.huggingface: plugin disabled (bundled (disabled by default)) but config is present
- plugins.entries.huggingface: plugin disabled (bundled (disabled by default)) but config is present

Not Changed

- No `.env` file was modified.
- No memory, skills, agents, reports, or runtime evidence were deleted.
- No OpenClaw+ service restart was required or run.
- No broad doctor fix, session cleanup, or transcript archive action was run.
- No external writes, SMB/Fork 2, Zapier writes, HeyGen generation, or farmer execution occurred.

Exact Next Step

Resolve the remaining doctor issues one by one: OpenClaw+ auth profile mismatch, disabled plugin/config mismatches, Telegram plugin status, unmatched agent directory/session transcript state, and stale service/unit guidance. Each should be fixed in its own scoped phase with backup and test proof before running any broad fixer.
