

Day 53 - Telegram PDF Delivery Closure

Date: 2026-05-10T15:54:37Z

Branch: to-knowledge-mc

Base commit before Day 53: 3650f5752b3a

Status: DEVELOPER-SIDE CLOSED / LIVE SEND GATED

Lane

Telegram PDF delivery through Agent Zero.

What changed

- Added exact Telegram PDF upload scope: 'telegram.upload_report_pdf'.
- Exposed the required scope and upload endpoint through Agent Zero Telegram delivery status.
- Changed Telegram PDF delivery so upload is blocked unless:
 - the Mission Control report exists,
 - an active approved Bridge Session exists,
 - the Bridge Session includes Telegram delivery scope,
 - Telegram connector credentials and owner chat target are configured,
 - a Bridge audit row is written before the Telegram API call.
- Updated Mission Control report delivery copy so it no longer says the Telegram route is missing when the route exists.
- Added a runtime guard smoke proving report/PDF creation works while Telegram upload remains Bridge-gated and cannot fake a send.

Files changed

- 'src/lib/agent-zero-telegram-delivery.ts'
- 'src/lib/agent-zero-telegram-delivery.test.ts'
- 'src/lib/agent-zero-report-delivery.ts'
- 'src/lib/agent-zero-report-delivery.test.ts'
- 'scripts/check-telegram-pdf-delivery-guard.mjs'
- 'runtime/day-53-telegram-pdf-delivery-guard-smoke.json'
- 'runtime/day-53-route-rendering-smoke.json'
- 'runtime/day-53-telegram-pdf-delivery-closure.md'
- 'runtime/day-53-telegram-pdf-delivery-closure.pdf'

Routes touched or verified

- 'GET /api/bridge/agent-zero/telegram/status'
- 'POST /api/bridge/agent-zero/telegram/upload-report'
- 'POST /api/bridge/agent-zero/reports'
- 'GET /api/bridge/agent-zero/reports/[id]/pdf'

UI and owner-facing behavior

- Report creation can produce a Mission Control PDF.
- Telegram upload is not shown as done unless Telegram confirms delivery.
- Telegram upload returns an exact blocker when Bridge Session scope is missing.
- Status reports 'CREDENTIAL_GATED' when Telegram connector configuration is absent.
- Owner-facing reply distinguishes connector missing from Bridge approval missing.

Service/runtime behavior

- Local production-style runtime restarted on '127.0.0.1:3337'.
- Runtime PID after final build/restart: '27179'.
- '/login' returned '200'.
- No public exposure was added.
- No '.env' changes were made.
- No secrets or Telegram tokens were printed.
- No external Telegram send was attempted during the smoke; the smoke used a deliberately nonmat

ching Bridge Session id.

Proof artifacts

- 'runtime/day-53-telegram-pdf-delivery-guard-smoke.json'
- 'ok: true'
- authenticated Telegram status: 'CREDENTIAL_GATED'
- required scope: 'telegram.upload_report_pdf'
- PDF endpoint returned 'application/pdf' and '%PDF-'
- upload route returned '423 active_bridge_session_required'
- no fake done
- no token exposure
- 'runtime/day-53-route-rendering-smoke.json'
- 'ok: true'
- failures: '0'

Tests and checks

- Focused tests:
 - 'pnpm exec vitest run src/lib/agent-zero-telegram-delivery.test.ts src/lib/agent-zero-report-delivery.test.ts --pool=forks --no-file-parallelism --reporter verbose'
 - Result: '2 files / 10 tests passed'
- Script syntax:
 - 'node --check scripts/check-telegram-pdf-delivery-guard.mjs'
- Diff whitespace:
 - 'git diff --check'
- Typecheck:
 - 'pnpm run typecheck'
- Build:
 - 'pnpm run build'
- Full tests:
 - 'pnpm test'
 - Result: '179 files / 1404 tests passed'
- Runtime guard:
 - 'node scripts/check-telegram-pdf-delivery-guard.mjs http://127.0.0.1:3337 runtime/day-53-telegram-pdf-delivery-guard-smoke.json'
- Route rendering:
 - 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337 > runtime/day-53-route-rendering-smoke.json'
- Final runtime smoke was rerun after the standalone build was resynced and the runtime was restarted.

Blocker classification

- Developer-side implementation: 'NONE'
- Live Telegram PDF send: 'OWNER_GATED' until an approved active Bridge Session includes 'telegram.upload_report_pdf'.
- Live Telegram connector: 'CREDENTIAL_GATED' if Telegram bot token or owner chat target is not configured.

Safety confirmation

- No '.env' edits.
- No secret output.
- No auth weakening.
- No fake sent status.
- No fake Done.
- No raw local paths in owner-facing delivery output.
- No Zapier writes.
- No SMB/Fork 2.
- No external farmers.

Rollback

Implementation rollback:

```
'git revert 73e82aa'
```

Commit and push

- Implementation commit: '73e82aa4e08a9823fc3e95eb8bc3b3d7db2abc55'
- Commit message: 'feat(telegram): gate pdf delivery with bridge audit'
- Push result: pushed to 'origin/to-knowledge-mc'
- Report-only closeout update: pending at this report revision

Next day started

After Day 53 commit/push, continue automatically to Day 54: Telegram report links.
