## # Day 99 - Final Blocker Elimination 100% Closure

- Lane: Final blocker elimination
- Status: DEVELOPER-SIDE CLOSED WITH EXTERNAL GATES CLASSIFIED
- Day 99 blocker classification: OWNER\_GATED
- Started from commit: 113d294acc8535554162c102aaffd0b71013377b
- Closed at: 2026-05-12T06:56:00Z

## ## What Was Implemented

Generated a live blocker table from the current local-only deployed runtime using protected proof APIs. The table preserves each runtime-reported status while normalizing the final Day 99 blocker class to the allowed closeout set: OWNER\_GATED, CREDENTIAL\_GATED, HARD\_RESET\_REQUIRED, or NONE.

No application source code, UI, designer files, auth policy, Bridge execution behavior, connector writes, SMB, Fork 2, or '.env' files were changed.

## ## Files Changed

- runtime/day-99-final-blocker-elimination.md
- runtime/day-99-final-blocker-elimination.pdf

- runtime/day-99-final-blocker-elimination/raw-exposure-scan.json

## ## Routes / Endpoints Checked

- /api/gateway/agent-hub/proof-packet
- /api/bridge/connector-proof-packet
- /api/bridge/approval-proof-packet
- /api/gateway/status
- /api/gateway/agent-hub/status
- protected route-smoke inventory
- authenticated route-smoke inventory

## ## UI Behavior

No UI changes were made. Existing UI truth remains bound to the normalized status/proof APIs. Remaining owner-facing blockers are documented rather than hidden or converted to fake LIVE/DONE states.

## ## Service / Runtime Behavior

Day 99 used the Day 97 local-only standalone runtime on '127.0.0.1:3337'. Protected proof endpoints were queried with the runtime's internal generated proof credential without printing the credential. No external write endpoints were executed.

## ## Final Blocker Table

See 'runtime/day-99-final-blocker-elimination/final-blocker-table.md' and 'runtime/day-99-final-blocker-elimination/live-blocker-table.json'.

Summary:

- Remaining blocker rows: 25
- Final classes present: CREDENTIAL\_GATED, OWNER\_GATED
- Invalid Day 99 final classes: 0
- HARD\_RESET\_REQUIRED: none
- Developer-side source blocker: none found in Day 99 checks

## ## Tests Run

- git diff --check: PASS
- .env diff check: PASS
- Focused proof tests: PASS, 5 files / 16 tests
  - src/lib/runtime-final-closeout-contract.test.ts
  - src/lib/agent-status-consistency.test.ts
  - src/lib/connector-proof-packet.test.ts
  - src/lib/bridge-approval-proof-packet.test.ts
  - src/lib/authenticated-visual-proof.test.ts
- Protected route smoke: PASS
- Authenticated route smoke: PASS with blocker\_class OWNER\_GATED
- Protected-file invariant scan: PASS
- Secret scan: PASS
- Raw exposure scan: PASS

## ## Deploy / Restart / Smoke Result

No deploy or restart was required. The existing local-only runtime remained active under screen session 'mc-day97'.

## ## Proof Artifact

- runtime/day-99-final-blocker-elimination/live-blocker-table.json
- runtime/day-99-final-blocker-elimination/final-blocker-table.md
- runtime/day-99-final-blocker-elimination/proof-summary.json
- runtime/day-99-final-blocker-elimination/protected-route-smoke.json
- runtime/day-99-final-blocker-elimination/authenticated-route-smoke.json
- runtime/day-99-final-blocker-elimination/secret-scan.json
- runtime/day-99-final-blocker-elimination/raw-exposure-scan.json
- runtime/day-99-final-blocker-elimination/protected-file-invariants.json

## ## Remaining Blocker

Remaining blockers are external gates only:

- OWNER\_GATED: missing/disabled local services or owner-run runtime components after developer proof exists.
- CREDENTIAL\_GATED: missing credentials/OAuth/provider configuration for Agent Zero, SpaceAgent, Telegram, AgentMail, Google Drive, OneDrive, Zapier, and HeyGen lanes.

Exact Day 99 blocker classification: OWNER\_GATED.

## ## Rollback Command

git revert <day-99-final-blocker-elimination-commit>

## ## Commit / Push

- Commit hash: pending at report creation
- Push result: pending at report creation

## ## Next Day

Day 100 - Final GO / NO-GO Declaration starts automatically after this Day 99 commit and push.
