

Day 84 â Agent Hub Designer Side-by-Side Closure

Phase 0-10 â Safety, Branch, Runtime

- Branch: 'to-knowledge-mc'.
- Runtime proof used local loopback only: 'http://127.0.0.1:3338'.
- No '.env' edits.
- No external writes, SMB, Fork 2, Zapier writes, HeyGen generation, or auth weakening.
- Designer mock HTML/CSS/class names were not edited. Day 84 only changed the approved data/script layer and GatewayShell tab hint.

Phase 10-20 â Inventory

- Active production Gateway entry: '/gateway' redirects into the approved designer Mission Control shell.
- Active Agent Hub tab: '/gateway?tab=agent-hub'.
- Raw designer asset: '/design/gateway/Agent Hub.html' served from 'public/designer-mission-control/design/gateway/Agent Hub.html'.
- Agent Hub live API: '/api/gateway/agent-hub/status' remains protected.
- Parked untracked duplicate wrapper routes remain unstaged and unused.

Phase 20-45 â Backend/Data Behavior

- Updated 'shared/agent-data.js' seed truth to match the canonical six-agent roster:
 - Paperclip: SERVICE_DOWN/red.
 - Agent Zero: CREDENTIAL_GATED/yellow, commander, no write/execute fake state.
 - Hermes: SERVICE_DOWN/red.
 - SpaceAgent: CREDENTIAL_GATED/yellow.
 - Pi-mono: READY/blue advisory-only.
 - OpenClaw+: SERVICE_DOWN/red.
- Added data-layer truth decoration for designer buttons:
 - approval-gated buttons carry 'APPROVAL_GATED' and Bridge Session reason.
 - read-only buttons carry 'READY_READ_ONLY'.
 - disabled controls carry 'DISABLED_WITH_REASON'.
- Kept live hydration path as '/api/gateway/agent-hub/status'; local proof classified API hydration as owner-auth gated because it returned 401.

Phase 45-65 â UI Behavior

- '/design/gateway/Agent Hub.html' renders the designer mock as the production UI.
- No HTML/CSS/class edits were made to the mock.
- Visible stale copy is corrected through data/script runtime replacement: '5 agents' -> '6 agents'.
- GatewayShell Agent Hub tab hint now says '6 agents'.
- No fake LIVE/green status appears in the seeded Agent Hub proof.

Phase 65-80 â Tests And Checks

- Focused tests passed:
 - 'pnpm exec vitest run src/lib/gateway-agent-hub-designer-data.test.ts src/app/design/gateway/route.test.ts src/lib/gateway-native-frame-decision.test.ts'
- Route smoke passed:
 - 'node scripts/protected-route-smoke-contract.mjs http://127.0.0.1:3338'
 - 'ok: true', failures: '[]'.
- Full validation gate passed:
 - 'git diff --check'
 - 'pnpm run typecheck'
 - 'pnpm run build'
 - 'pnpm test' â 202 files, 1498 tests passed.
 - 'node scripts/check-protected-file-invariants.mjs'
 - 'node scripts/secret-scan-contract.mjs'
 - 'node scripts/raw-exposure-scan-contract.mjs'
 - '.env' diff check

Phase 80-95 â Runtime Proof

- Direct raw design route returned 200 with owner proof cookie.
- Unauthenticated route smoke proved protected pages and APIs redirect/401 without exposing content

ent.

- Browser proof captured:
 - direct Agent Hub screenshot: 'runtime/day-84-agent-hub-designer-side-by-side/direct-agent-hub-truth.png'
 - GatewayShell Agent Hub screenshot: 'runtime/day-84-agent-hub-designer-side-by-side/gateway-shell-agent-hub-truth.png'
- Proof JSON:
 - 'runtime/day-84-agent-hub-designer-side-by-side/proof.json'
 - direct agent IDs: 'paperclip', 'agent-zero', 'hermes', 'space-agent', 'pi-mono', 'openclaw-plus'
 - green status count: '0'
 - visible six-agent text: 'true'
 - stale five-agent text: 'false'
 - decorated button samples: '12'

Phase 95-100 â Closeout

- Status: developer-side closed; owner-auth API hydration retest remains gated.
- Blocker classification: 'OWNER_GATED'.
- Remaining blocker: production owner session/API proof is required to verify live Agent Hub hydration through '/api/gateway/agent-hub/status'; local browser proof received API '401' without a real owner session.
- Deploy/restart: not performed. Local proof used bounded Next dev server and stopped it after proof. Production restart remains owner/runtime gated.
- CloudCode package: no new backend-support apply in Day 84; previously consumed backend truth APIs remained in place. Day 84 consumed the approved designer drop-in data surface only.
- Rollback command after commit: 'git revert <day-84-commit>'.
- Before commit rollback:

```
""bash
```

```
git restore public/designer-mission-control/design/gateway/shared/agent-data.js public/designer-mission-control/src/gateway/GatewayShell.jsx src/lib/gateway-agent-hub-designer-data.test.ts
rm -rf runtime/day-84-agent-hub-designer-side-by-side
```

```
""
```

Files Changed

- 'public/designer-mission-control/design/gateway/shared/agent-data.js'
- 'public/designer-mission-control/src/gateway/GatewayShell.jsx'
- 'src/lib/gateway-agent-hub-designer-data.test.ts'
- 'runtime/day-84-agent-hub-designer-side-by-side/*'

Routes Changed

- No new route file.
- '/gateway?tab=agent-hub' now presents the Agent Hub tab with a truthful six-agent hint.
- '/design/gateway/Agent Hub.html' keeps serving the raw designer asset and uses truthful data-layer state.

Next Day

Day 85 â Mission Control Movement has automatically started after this Day 84 developer-side closure.
