

Day 88 â Accessibility Pass

Phase 0-20 Inventory

- Branch: 'to-knowledge-mc'
- Start commit: '95ea7b8'
- '.env' changes: none requested, none made
- Secret risk: no secrets inspected or emitted
- Scope: Mission Control shell, Gateway shell wrapper, approved raw Gateway mock mount, visible controls, keyboard/focus/labels/disabled-state behavior
- Design constraint: approved raw mock HTML/CSS/class names remain untouched unless a designer-provided patch explicitly owns those files.

Initial Targets

- Verify top-level shell controls have keyboard-accessible button/link semantics.
- Verify iframe has descriptive title text for Gateway tabs.
- Verify narrow-screen controls hidden for responsive layout do not create dead keyboard traps.
- Verify disabled/gated visible controls expose truthful state and do not fake execution.
- Add/adjust shell-level tests for accessible labels and focus-visible behavior where code-owned shell markup exists.

Phase 20-65 Implementation

- Converted the code-owned Gateway sub-rail tab controls from clickable 'div' elements into real buttons with 'type="button"', descriptive labels, and 'aria-current' for the active tab.
- Added a descriptive 'aria-label' to the Gateway iframe while keeping the iframe pointed at the approved raw designer HTML assets.
- Converted the topbar command-search affordance from a clickable wrapper with a read-only input into a real button with safe visible text, removing the keyboard trap caused by a non-editable input.
- Added labels and 'type="button"' semantics to the settings, persona, workspace rail, notification bell, and notification close controls.
- Added visible focus outlines for shell-level buttons, links, workspace rail controls, persona control, and Gateway sub-rail controls.
- Did not modify approved raw mock HTML/CSS/class names under 'public/designer-mission-control/design/gateway/'.

Phase 65-80 Tests And Checks

- 'git diff --check' â PASS
- '.env' diff check â PASS
- 'pnpm exec vitest run src/lib/mission-control-shell.test.ts' â PASS, 8 tests
- 'pnpm run typecheck' â PASS after removing stale generated '.next/dev/types' output; no source files changed for that cleanup
- 'pnpm run build' â PASS
- 'pnpm test' â PASS, 202 files, 1502 tests
- 'node scripts/protected-route-smoke-contract.mjs http://127.0.0.1:3342' â PASS, 44 routes
- 'node scripts/authenticated-route-smoke-contract.mjs http://127.0.0.1:3342' â PASS as 'OWNER_GATED'; no owner authenticated browser session was available and no cookie value was stored
- 'node scripts/check-protected-file-invariants.mjs' â PASS
- 'node scripts/secret-scan-contract.mjs' â PASS
- 'node scripts/raw-exposure-scan-contract.mjs' â PASS

Phase 80-95 Runtime Proof

- Local proof server: '127.0.0.1:3342'
- Server stop result: stopped after proof; no production restart performed
- Keyboard proof artifact: 'runtime/day-88-accessibility-pass/keyboard-accessibility-proof.json'
- Screenshot proof artifact: 'runtime/day-88-accessibility-pass/keyboard-accessibility-proof.png',
- Route smoke artifact: 'runtime/day-88-accessibility-pass/protected-route-smoke.json'

- Authenticated smoke artifact: 'runtime/day-88-accessibility-pass/authenticated-route-smoke.json'
- Protected-file artifact: 'runtime/day-88-accessibility-pass/protected-file-invariants.json'
- Secret scan artifact: 'runtime/day-88-accessibility-pass/secret-scan.json'
- Raw exposure artifact: 'runtime/day-88-accessibility-pass/raw-exposure-scan.json'

Phase 95-100 Closeout Ledger

- Day number and lane: Day 88 â Accessibility Pass
- Status: developer-side closed with owner-auth visual proof gated
- Exact blocker classification: 'OWNER_GATED'
- Remaining blocker: owner authenticated browser session required for true owner-session visual proof; local visual-cookie proof and unauthenticated protection proof are complete
- What was implemented: shell-level keyboard semantics, labels, focus visibility, active-tab state, and iframe label for the Mission Control/Gateway wrapper
- Files changed: 'public/designer-mission-control/src/gateway/GatewayShell.jsx', 'public/designer-mission-control/src/notifications-drawer.jsx', 'public/designer-mission-control/src/replicas/WorkspaceRail.jsx', 'public/designer-mission-control/src/shell.jsx', 'public/designer-mission-control/styles.css', 'src/lib/mission-control-shell.test.ts', 'runtime/day-88-accessibility-pass.md', 'runtime/day-88-accessibility-pass/*'
- Routes/endpoints changed: none; '/gateway' and Gateway query-tab routing remain the production shell surface
- UI behavior: keyboard users can tab to and identify topbar controls, workspace rail entries, Gateway tab controls, notification controls, persona, and settings; active Gateway tab is exposed with 'aria-current'; focus state is visible
- Service/runtime behavior: no service behavior changed; proof server was local-only and stopped after smoke
- Deploy/restart/smoke result: no production deploy/restart performed; local route smoke passed
- Proof artifact: 'runtime/day-88-accessibility-pass/keyboard-accessibility-proof.json'
- Rollback command: 'git revert <day-88-commit>'
- Commit hash: pending commit
- Push result: pending push
- Confirmation that next day has automatically started: Day 89 â Error Message Polish starts after Day88 commit/push
