Day 10 â Bridge Session Approvals Closure

Date: 2026-05-10T02:16:57Z

Status: DEVELOPER-SIDE CLOSED, OWNER_GATED FOR LIVE APPROVED EXECUTION

Lane

Bridge Session approval lifecycle.

What Changed

- Fixed the Build-Wiki / Farmer Run Now read model so a pending approval past 'expires_at' renders as terminal 'expired', not 'pending_approval'.
- Added a regression test proving the Run Now GET route reports expired pending approvals truthfully.
- Did not alter Bridge auth, owner approval rules, execution scope, '.env', secrets, or external write behavior.

Files Changed

- 'src/lib/build-wiki-run-now.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/run-now/route.test.ts'
- 'runtime/day-10-bridge-approvals-closure.md'
- 'runtime/day-10-bridge-approvals-closure.pdf'

Routes / Endpoints Verified

- 'GET /api/bridge/approval-readiness'
- 'GET /api/bridge/approval-contract'
- 'GET /api/bridge/approval-requests?limit=5'
- 'GET /api/bridge/approval-requests/audit-report'
- 'GET /api/bridge/brain-sync/build-wiki/run-now'
- 'POST /api/bridge/brain-sync/build-wiki/run-now'
- route render smoke for Mission Control / Gateway protected pages and Bridge APIs

Live Runtime Proof

Production-like local runtime was rebuilt and restarted on '127.0.0.1:3337'.

New runtime PID: '29809'

Run Now stale-expiration proof before creating a new request:

- latest old Build-Wiki request: 'apr_5f8fd696-5469-4569-bacf-653efde203c5'
- approval state in DB: 'pending'
- 'expires_at': '2026-05-09T23:40:00.565Z'
- UI state after fix: 'expired'
- terminal: 'true'
- execution enabled: 'false'
- accepted for execution: 'false'

New exact-scope approval request created for proof only:

- approval id: 'apr_9a5acdc4-4106-477c-8cde-3f1a52b7ea76'
- audit event id: 'audit_a7572e8a-0ebe-427f-9040-02fb378aebf4'
- action: 'buildwiki.run_now'
- target service: 'opencloud-docs-farmer.service'
- UI state: 'pending_approval'
- execution enabled: 'false'
- accepted for execution: 'false'
- writes enabled: 'false'

- next action: owner approval required before dispatch

Approval queue after proof:

- total approvals: '15'
- pending: '2'
- active pending: '2'
- approved: '7'
- denied: '3'
- expired: '3'
- running: '0'
- completed: '0'
- failed: '0'

Active pending requests:

- 'apr_9a5acdcd-4106-477c-8cde-3f1a52b7ea76' â 'buildwiki.run_now', blocker 'owner_approval_required_before_execution'
- 'apr_b1367ff0-6f12-41d2-a601-8cf7445a2b3f' â 'agent_zero.execute', blocker 'owner_approval_required_before_execution'

UI Behavior

- Bridge queue is readable.
- Pending approvals show yellow owner-gated state.
- Expired Run Now approvals no longer look pending.
- Run Now proof request stays approval-gated.
- No fake run, send, upload, or done state was emitted.

Service / Runtime Behavior

- 'POST /api/bridge/brain-sync/build-wiki/run-now' created only an approval request and audit row.
- It did not run 'systemctl'.
- 'systemctl --user start opencloud-docs-farmer.service' remains reachable only through the scoped dispatch path after owner approval.
- No SMB/Fork 2, Zapier write, HeyGen generation, external farmer, or second vault was enabled.

Tests / Verification

- 'git diff --check'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'
- Targeted Bridge lifecycle tests:
 - 'src/lib/bridge-approval-lifecycle.test.ts'
 - 'src/lib/bridge-approval-ui-state.test.ts'
 - 'src/app/api/bridge/approval-requests/[id]/approve/route.test.ts'
 - 'src/app/api/bridge/approval-requests/[id]/deny/route.test.ts'
 - 'src/app/api/bridge/approval-requests/audit-report/route.test.ts'
 - 'src/app/api/bridge/brain-sync/build-wiki/run-now/route.test.ts'
 - 'src/app/api/bridge/brain-sync/build-wiki/run-now/[id]/dispatch/route.test.ts'
- Full test result: '171' test files, '1358' tests passed.
- Route rendering smoke: 'ok: true', '46' routes checked, '8' designer pages checked, '0' failures.

Safety Confirmation

- No '.env' change.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No raw local paths added to owner-facing output.
- No fake LIVE/GO/Done status.

- No external write executed.

Remaining Blocker

Blocker class: 'OWNER_GATED'

Exact blocker: 'owner_approval_required_before_execution'

Reason: the live proof created an exact-scope approval request, but did not approve or dispatch it. A real approved execution requires owner approval of 'apr_9a5acdcd-4106-477c-8cde-3f1a52b7ea76'.

Rollback

Code rollback after commit:

```
""bash
git revert <day10_bridge_commit_sha>
""
```

Live request rollback / cleanup:

- deny 'apr_9a5acdcd-4106-477c-8cde-3f1a52b7ea76', or let it expire.
- do not dispatch it unless owner explicitly approves the exact scope.

Commit / Push

- Commit hash: recorded after this report commit is created.
- Push result: recorded after push.

Next Day

Day 11 â Dispatcher Core starts automatically after this Day 10 commit and push.
