

day-02-hermes-closure

Day 02 - Hermes Closure

Date: 2026-05-09

Status: PARTIAL GO - safe read-only adapter proves 'hermes_called:true'; standalone Hermes runtime remains service-gated

Lane

Hermes is the lieutenant / skill-workflow builder under Agent Zero. This day does not claim full Hermes GO because the Hermes status route still reports the standalone runtime blocker 'hermes_not_installed'.

What Was Verified

- Branch: 'to-knowledge-mc'
- Runtime bind: '127.0.0.1:3337'
- Runtime PID: '8391'
- Branch HEAD before this report: '9a74511'
- '/api/bridge/hermes/status': 200
- '/api/bridge/hermes/status' blocker: 'hermes_not_installed'
- '/api/bridge/hermes/test-chat': 200
- 'hermes_called': true
- Response source: Mission Control safe live adapter
- Execution enabled: false
- Writes enabled: false
- Protected actions enabled: false

Required Role Answer

Hermes answered the safe prompt:

""text

Sir, Agent Zero is the commander. Hermes is the lieutenant for skills, workflows, automations, and operational plans; execution remains disabled until a Bridge Session exists.

""

This satisfies the read-only lieutenant behavior proof without enabling tools or writes.

Remaining Runtime Blocker

- Blocker: 'hermes_not_installed'
- Blocker class: 'SERVICE_DOWN'
- Meaning: the standalone Hermes CLI/service is not installed/reachable from this runtime context.
- Current safe proof path: Mission Control read-only Hermes adapter.
- Not claimed: standalone Hermes runtime/CLI GO.

UI / Gateway Truth

- Hermes must stay visible as lieutenant / workflow builder.
- Hermes must not be shown as unrestricted LIVE runtime while 'hermes_not_installed' remains.
- Protected execution still requires Bridge Session.
- No tool execution, file writes, email sends, uploads, or memory mutation were enabled.

Tests / Validation Already Run In This Workstream

- 'git diff --check': PASS
- 'pnpm run typecheck': PASS
- 'pnpm run build': PASS
- 'pnpm test': PASS, 171 files / 1356 tests
- Backend-support typecheck/build/tests: PASS
- Protected-file invariant scan: PASS

- Changed-file secret scan: PASS
- Staged secret scan: PASS
- '.env' status check: clean

Blocker Classification

- Developer-side safe adapter: proven
- Standalone runtime: 'SERVICE_DOWN'
- Owner/admin action if full standalone runtime is required: install/expose the Hermes runtime/CLI or service for the Mission Control runtime user.

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure.
- No external writes.
- No fake delivery.
- No fake Done.

Rollback

This day added a report only. Roll back the report commit after it is created:

```
""bash
git revert <day-02-report-commit>
""
```

Next Day Started

Day 03 - Pi closure starts next. Pi must be proven as Dispatcher / Route Optimizer Candidate with advisory-only behavior and no writes.
