

Phase 5 - Firecrawl Read-Only Proof

Generated: 2026-05-07T21:00:20-04:00

Result

****BLOCKED / NOT CONNECTED****

Firecrawl cannot be moved to connected/read-only in this phase. The correct blocker is:

`firecrawl\_credential\_required`

Mission Control does not have a Firecrawl credential available to its runtime, and the Firecrawl SDK package is not installed in the Mission Control dependency tree. No Firecrawl request was executed.

Credential and Backend Checks

Check	Result
Shell environment credential present	no
Mission Control repo env credential present	no
Firecrawl-related filename discovered in runtime/config tree	possible filename only; no value inspected or printed
Firecrawl SDK present in Mission Control dependencies	no
Safe read-only Firecrawl smoke	not run
ResearchPacket via Firecrawl	blocked packet behavior only

No secret values were printed, read into output, or committed.

Route Protection Smoke

Unauthenticated route checks after Mission Control restart:

Route	Result	Meaning
GET /api/firecrawl/status	401	protected
GET /api/gateway/space-agent/research	401	protected
GET /api/gateway/nodes/space-agent	401	protected
GET /api/gateway/space-agent/browser/status	401	protected

Authenticated Firecrawl smoke remains blocked because no owner/operator session and no Firecrawl credential are available in this worker context.

Tests

Test	Result
------	--------

src/lib/space-agent-research.test.ts	29 passed
src/lib/space-agent-health.test.ts	3 passed
Combined focused tests	32 passed

The tests confirm SpaceAgent/Gateway can classify Firecrawl research and return blocked-state packets without claiming fake access.

Gateway / Agent Hub Status

Surface	Honest State
SpaceAgent Firecrawl card	blocked
Firecrawl capability	credential required
External writes	disabled
Bridge Session	still required for any future scoped execution
Firecrawl live adapter	not proven

Security Confirmation

- No secrets printed.
- No auth files printed.
- No ``.env`` changes.
- No external writes.
- No crawler job executed.
- No Zapier / HeyGen / SMB / farmer action.
- No fake Firecrawl connected status.

Updated Percentage

System	Previous	Updated
Firecrawl	blocked	25% blocked
SpaceAgent	66% PARTIAL GO	66% PARTIAL GO

Exact Next Step

Owner/admin must provide an approved Firecrawl credential sync path for Mission Control and approve installing/wiring the Firecrawl backend package. After that, rerun a single read-only public-page smoke and return a ResearchPacket.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-5-commit>`
```
