

Day 02 FIRECRAWL-PREP-1 – Secure Credential Sync Plan

Objective

Confirm Firecrawl credential presence via approved sources (yes/no only) and document secure sync path without exposing secrets.

Result

BLOCKED (sync approval/action required).

Actions Executed

1. Queried Mission Control Firecrawl status route.
2. Verified credential presence flags only (no values).
3. Verified cross-environment credential-name visibility signals (Mission Control vs ClaudeClaw/OpenClaw+).
4. Confirmed no ``.env`` edits performed.

Commands / Routes Used

- ``GET /api/firecrawl/status``

Proof

- Mission Control process credential: ``key_present=false``.
- Mission Control SDK presence: ``sdk_loaded=false``.
- Firecrawl backend truth summary showed:
 - ``claudeclaw_env_has_firecrawl_api_key=true`` (name presence only)
 - ``openclaw_env_has_firecrawl_api_key=true`` (name presence only)
 - ``mission_control_env_has_firecrawl_api_key=false``
 - ``mismatch=true``
 - ``approved_fix_required=true``

Files Changed

- None.

Tests

- Firecrawl status route probe: PASS (truthful blocked state).

Blockers

- ``firecrawl_credential_required``
- ``firecrawl_secure_credential_sync_required``

Rollback

- No code change in this phase.

No-Secrets Confirmation

- No credential value printed.
- No auth file contents printed.
- No ``.env`` mutation.

Updated Percentage

- Firecrawl remains blocked baseline until approved secret sync + backend readiness.

Exact Next Step

Perform owner-approved secure credential sync into Mission Control runtime secret source (without copying raw secret values into reports/logs), then re-check status route.
