

Day 02 MAIN-1 – Owner Browser Proof

Objective

Prove owner-authenticated visual access for Mission Control → Gateway → Agent Hub with the five primary cards and safety checks.

Result

BLOCKED (campaign continued).

Actions Executed

1. Confirmed production API health post-Day-1 restart acceptance and post-Day-2 runtime stabilization.
2. Verified protected route families are still auth-gated (`401` unauthenticated).
3. Checked availability of an owner-authenticated browser session in this automation context.

Commands / Routes Used

- Unauthenticated checks:
 - `GET /api/gateway/status`
 - `GET /api/gateway/agent-hub/status`
 - `GET /api/bridge/agent-zero/status`
 - `GET /api/bridge/hermes/status`
 - `GET /api/bridge/pi/status`
 - `GET /api/bridge/paperclip/status`
 - `GET /api/bridge/playwright-mcp/status`
 - `GET /api/firecrawl/status`
 - `GET /api/gateway/nodes/firecrawl`

Proof

- Protected routes returned `401` when unauthenticated.
- No owner-authenticated browser session token/profile was available to this automation run.

Files Changed

- None.

Tests

- Auth gate smoke: PASS (`401` unauthenticated on protected routes).

Blocker

- `owner\_authenticated\_browser\_session\_required`

Rollback

- No code change in this phase; rollback not required.

No-Secrets Confirmation

- No secrets printed.
- No auth files printed.
- No `.env` changes.

Updated Percentage

- Gateway / Agent Hub visual-owner-proof subtrack: unchanged, still blocked by session availability.

Exact Next Step

Run this same visual checklist inside an owner-authenticated browser session and capture screenshot evidence.
