

Day 02 MAIN-2 – Hermes Safe Live Adapter

Objective

Move Hermes from NO-GO live to proven safe live read-only operation.

Result

PASS.

Actions Executed

1. Confirmed `hermes-gateway.service` is active.
2. Diagnosed repeated `better-sqlite3` ABI mismatch in production standalone runtime (source of Hermes/Agent Zero `500` instability).
3. Rebuilt and redeployed production standalone artifact.
4. Applied runtime-safe `better-sqlite3` compatibility fix for standalone runtime (non-secret, no `.env` changes).
5. Re-ran Hermes route checks and live test-chat.

Commands / Routes Used

- Service/runtime checks:
 - `systemctl --user is-active hermes-gateway.service`
 - production process + log inspection
- Authenticated route checks:
 - `GET /api/bridge/hermes/status`
 - `POST /api/bridge/hermes/test-chat`
- Unauthenticated guard check:
 - `GET /api/bridge/hermes/status` (without auth) → `401`

Proof

- `GET /api/bridge/hermes/status` authenticated: `200`.
- `POST /api/bridge/hermes/test-chat` authenticated: `200`.
- Response contract:
 - `hermes\_called: true`
 - `response\_source: mission\_control\_safe\_live\_adapter`
 - `execution\_enabled: false`
 - `writes\_enabled: false`
 - `blocker: null`
- Unauthenticated Hermes status route: `401`.

Files Changed

- Local code already contained the adapter patch from commit `e89f5bd`.
- No additional source edits in this phase; production runtime artifact rebuilt/restarted.

Tests

- Live Hermes route smoke: PASS.
- Auth gate check: PASS.

Blockers

- None for this phase.

Rollback

1. Repoint standalone runtime to previous artifact.
2. Restart standalone server process.
3. Verify Hermes status/test-chat regress to prior known state.

No-Secrets Confirmation

- No tokens or key values printed.
- No auth files printed.
- No `.env` mutation performed.

Updated Percentage

- Hermes track: moved from NO-GO baseline to live safe-adapter proven (now PARTIAL GO / high confidence read-only live path).

Exact Next Step

Use this now-live safe adapter in Agent Zero → Hermes planning handoff proof and keep execution/write gating enforced.
