

Day 02 MAIN-4 – Paperclip Service and Owner Login

Objective

Move Paperclip from degraded to live read-only Workforce Control Plane proof.

Result

PARTIAL (service health proven, owner-login proof blocked in this run).

Actions Executed

1. Checked Paperclip bridge routes from Mission Control.
2. Verified host process/listener for Paperclip runtime.
3. Probed Paperclip health endpoint in local/Tailnet scope.
4. Validated write/execute gating remains disabled at bridge layer.

Commands / Routes Used

- Mission Control bridge:
 - `GET /api/bridge/paperclip/status`
 - `GET /api/bridge/paperclip/companies`
 - `GET /api/bridge/paperclip/agents`
 - `GET /api/bridge/paperclip/issues`
- Runtime/network:
 - service/process checks
 - Paperclip health probe on local/Tailnet endpoint (`/api/health`)

Proof

- `GET /api/bridge/paperclip/status`: `200` with blocker `paperclip\_auth\_required\_or\_not\_configured`.
- `GET /api/bridge/paperclip/companies|agents|issues`: `503`, same blocker.
- Paperclip runtime health endpoint returned `200` with healthy bootstrap payload.
- Bridge layer remains read-only/gated (`execution\_enabled: false`, `writes\_enabled: false`).

Files Changed

- None.

Tests

- Paperclip bridge route smoke: PARTIAL PASS (status reachable, auth/config blocker remains).

Blockers

- `paperclip\_owner\_session\_required`
- `paperclip\_auth\_required\_or\_not\_configured`

Rollback

- No code change in this phase.

No-Secrets Confirmation

- No credential values printed.
- No `.env` changes.

Updated Percentage

- Paperclip track: improved confidence on service health visibility, still PARTIAL due owner/auth bridge gap.

Exact Next Step

Complete owner-auth login/session bridge proof and then re-run companies/agents/issues route checks for live read-only data.
