

Day 02 MAIN-5 – Bridge Session Live Execution Proof

Objective

Prove one safe scoped Bridge Session execution path.

Result

PARTIAL (session lifecycle visible; action execution blocked pending owner approval).

Actions Executed

1. Queried Bridge Session status route.
2. Attempted one safe execution-gateway action using a registered adapter pattern.
3. Verified blocked behavior, audit contract, and no fake execution.

Commands / Routes Used

- `GET /api/bridge/agent-zero/bridge-session`
- `POST /api/bridge/agent-zero/execute`

Proof

- Bridge session status route returned `200`, with execution disabled by default.
- Execution attempt returned blocked response with session state:
 - `status: blocked`
 - `accepted\_for\_execution: false`
 - `bridge\_session.status: pending\_approval`
 - `bridge\_session.blocked\_reason: owner\_approval\_pending`
 - `no\_fake\_done: true`
- No out-of-scope action executed.

Files Changed

- None.

Tests

- Bridge Session gating smoke: PASS (correctly blocked without active approved session).

Blockers

- `active\_bridge\_session\_required`
- `owner\_approval\_pending`

Rollback

- No code change in this phase.

No-Secrets Confirmation

- No secret values printed.
- No unsafe connector execution performed.

Updated Percentage

- Bridge Session track: lifecycle visibility confirmed; execution proof remains gated by approval.

Exact Next Step

Open owner-approved scoped Bridge Session, execute exactly one safe action, verify audit + expiration, then re-run this phase.
