

Day 02 MAIN-7 – OpenClaw+ Health and Security Hardening

Objective

Advance OpenClaw+ health and security hardening without destructive or unsafe changes.

Result

PARTIAL (non-destructive review completed; owner/admin actions still required).

Actions Executed

1. Queried OpenClaw doctor API route.
2. Checked OpenClaw+/ClaudeClaw runtime binaries and service state.
3. Queried production security scan and extracted required hardening items.
4. Avoided destructive host/security changes and avoided `.env` edits.

Commands / Routes Used

- `GET /api/openclaw/doctor`
- security scan endpoint (`GET /api/security-scan`)
- service/binary checks (`claudeclaw.service`, `openclaw`/`claudeclaw` binary presence)

Proof

- OpenClaw doctor route returned `400` with error:
 - `OpenClaw is not installed or not reachable`
- Runtime check:
 - `claudeclaw.service` active
 - `openclaw` and `claudeclaw` CLI binaries not in current PATH for this host user context.
- Security scan current score observed at `72`, with open items including:
 - `auth\_pass` (fail)
 - `hsts\_enabled` (warn)
 - `exec\_restricted` (warn)
 - `tools\_deny\_list` (warn)
 - `sandbox\_mode` (warn)
 - `backup\_recent` (warn)
 - `receipt\_signing` (warn)
 - `firewall` (warn)
 - `open\_ports` (fail)
 - `disk\_encryption` (warn)
 - `linux\_core\_dumps` (warn)
 - `linux\_mac\_framework` (warn)
 - `linux\_tmp\_noexec` (warn)

Files Changed

- None.

Tests

- OpenClaw doctor route probe: FAIL (unreachable in current host context).
- Security scan route probe: PASS (results retrievable).

Blockers

- `openclaw\_doctor\_runtime\_not\_reachable`
- host/admin-level hardening changes required for several security warnings

Rollback

- No code change in this phase.

No-Secrets Confirmation

- No secrets exposed.
- No `.env` mutation.
- No destructive host changes.

Updated Percentage

- OpenClaw+ / security-hardening track remains PARTIAL G0.

Exact Next Step

Restore OpenClaw doctor runtime reachability in production context, then apply only approved safe

hardening fixes and re-scan.
