

Day 39 - Memory / Governance Guardrails

Date: 2026-05-09

Status: DEVELOPER-SIDE PASS

Blocker class: NONE

Source commit: '3703c60'

Push result: pushed to 'origin/to-knowledge-mc'

Lane

Day 39 closes the memory/governance guardrail lane for accidental protected-file changes. It does not modify active agent routing, voice routing, Tony behavior, owner memory, runtime data, 'env', or governance documents.

Inventory

- Existing protected-file invariant script: 'scripts/check-protected-file-invariants.mjs'.
- Existing coverage before Day 39: '.env' files, database files, '.data/', private keys, backup archives.
- Gap found: no explicit protection for active memory files/stores or governance stores before staging/commit.
- Active memory route inspected: 'src/app/api/memory/route.ts'.
- Per-agent working-memory route inspected: 'src/app/api/agents/[id]/memory/route.ts'.
- Shared memory path safety inspected: 'src/lib/memory-path.ts'.
- Existing runtime memory paths are path-contained and auth-guarded; no runtime route changes were required for this day.

Implemented

Updated 'scripts/check-protected-file-invariants.mjs' to fail if git status includes protected changes to:

- 'active_memory_file': 'WORKING.md' or 'MEMORY.md'.
- 'active_memory_store': active memory store directories such as 'agent-memory', 'memory-store', 'memory-data', 'openclaw-memory', 'hermes-memory', 'mempalace', 'obsidian-vault', or root 'memory/' and 'memories/'.
- 'governance_file': root governance directory or governance metadata files.
- 'legacy_tony_identity_store': legacy Tony identity store directories such as 'tony-memory', 'tony-voice', 'tony-routing', or 'tony-governance'.

The script still inspects git status paths only. It does not read or print protected file contents.

Guardrail Test

Added 'scripts/check-protected-file-invariants-self-test.mjs'.

The self-test verifies:

- Runtime reports are allowed.
- Memory source code changes are allowed.
- Active agent 'WORKING.md' is blocked.
- Root 'MEMORY.md' is blocked.
- Runtime memory store paths are blocked.
- Governance directory changes are blocked.
- Legacy Tony identity stores are blocked.

Red/green note:

- The self-test failed before the invariant update because 'agents/agent-zero/WORKING.md' was not blocked.
- The self-test passed after the invariant update.

UI Behavior

No owner-facing UI was changed on Day 39. This day adds a commit-time protection layer only.

Service / Runtime Behavior

No service runtime behavior was changed. No restart is required for this script-only guardrail lane.

Proof Artifact

'runtime/day-39-memory-governance-guardrails-proof.json'

Current proof:

- self-test: PASS, 7 fixtures checked.
- workspace invariant scan: PASS, 0 protected changes.
- '.env' changed: no.
- secrets printed: no.
- auth weakened: no.
- active memory deleted: no.
- governance modified: no.
- Tony routing/voice/memory/governance modified: no.

Validation

Completed validation:

- 'git diff --check' - PASS
- 'pnpm run typecheck' - PASS
- 'pnpm run build' - PASS
- 'pnpm test' - PASS, 159 files / 1331 tests
- 'node scripts/check-protected-file-invariants-self-test.mjs' - PASS, 7 fixtures checked
- 'node scripts/check-protected-file-invariants.mjs' - PASS, 0 protected changes
- staged secret scan - PASS
- '.env' diff check - clean

Runtime smoke:

- '/login' - 200
- unauthenticated '/api/memory/health' - 401
- unauthenticated '/api/memory?action=tree' - 401
- unauthenticated '/api/agents/agent-zero/memory' - 401

No production restart was performed because Day 39 changed scripts/reports only and did not alter runtime application source.

Rollback

'git revert 3703c60'

Next Day

After validation, commit, and push, automatically start Day 40: Knowledge Report 100% Closure.
