

Phase 6 - YouTube Transcript Connector Proof

Generated: 2026-05-07T21:03:11-04:00

Result

****PARTIAL GO / READ-ONLY TRANSCRIPT PROOF PASSED****

A safe public YouTube metadata/transcript smoke passed without downloading the video and without bypassing login, age, region, copyright, or paywall controls.

Live Read-Only Smoke

Check	Result
Test source	public YouTube video
Metadata extraction	success
Title field	present
Channel field	present
Publish date field	present
Description field	present
Chapter list	not present on test source
Transcript extraction	success
Transcript sample segments	5 sampled
First transcript timestamp	1.36 seconds
Full video download	not performed
Login / private bypass	not attempted

The proof used metadata and transcript-only tooling. It did not download the video file or access private account content.

Route Protection Smoke

Unauthenticated route checks after Mission Control restart:

Route	Result	Meaning
GET /api/gateway/space-agent/research	401	protected
GET /api/gateway/nodes/space-agent	401	protected
GET /api/gateway/space-agent/browser/status	401	protected

Authenticated production UI/API proof is still pending owner/browser session access, but the local read-only connector proof passed.

Packet Status

Packet Item	State
YouTubeResearchPacket schema	implemented
Metadata fields	supported
Transcript-backed claims	supported when transcript is available
Timestamps	supported when transcript segments include starts
Missing transcript behavior	limited packet, not fake analysis
Full video download	blocked by default
Frame capture	blocked unless tooling is separately approved

Tests

Test	Result
src/lib/space-agent-youtube-scenarios.test.ts	4 passed
src/lib/space-agent-research.test.ts	29 passed
Combined focused tests	33 passed

Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env`` changes.
- No full video download.
- No login or restriction bypass attempted.
- No external writes.
- No fake transcript claim.

Updated Percentage

System	Previous	Updated
YouTube research	limited / pending	72% PARTIAL GO
SpaceAgent	66% PARTIAL GO	70% PARTIAL GO

The remaining gap is authenticated Mission Control route/UI proof and a persistent production route that returns this packet through the Gateway/SpaceAgent API surface.

Exact Next Step

Wire the read-only transcript smoke into the authenticated Gateway/SpaceAgent research route, then verify it through owner-authenticated browser/API proof.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-6-commit>`
```
