Day 36 â Farmer Rollback / Disable 100% Closure

Date: 2026-05-09

Lane: Brain / Build-Wiki / Farmer

Status: CLOSED AS SERVICE_DOWN

Blocker class: SERVICE_DOWN

Objective

Publish safe rollback / disable guidance for the Fork 1 Build-Wiki Farmer without creating a fake disable button, broad execution path, SMB/Fork 2 path, external farmer path, or second vault.

What Was Implemented

- Added a read-only 'rollback_disable' contract to 'GET /api/bridge/brain-sync/build-wiki/status'.
- Exposed owner/admin host runbook steps for stopping the oneshot service and disabling the timer.
- Kept all disable controls non-executable from Mission Control.
- Added the rollback/disable state to the Mission Control Build-Wiki card as 'RUNBOOK_ONLY'.
- Added tests proving the runbook is exact, read-only, scoped to Fork 1, and secret/path safe.

Files Changed

- 'src/app/api/bridge/brain-sync/build-wiki/status/route.ts'
- 'src/app/api/bridge/brain-sync/build-wiki/status/route.test.ts'
- 'src/components/agent-network/AgentNetworkClient.tsx'

Routes Changed

- 'GET /api/bridge/brain-sync/build-wiki/status'

New response field:

```
""json
{
  "rollback_disable": {
    "read_only": true,
    "execution_enabled": false,
    "writes_enabled": false,
    "disable_controls_enabled": false,
    "bridge_session_required_for_future_disable_control": true,
    "service_unit": "opencloud-docs-farmer.service",
    "timer_unit": "opencloud-docs-farmer.timer"
  }
}
""
```

UI Behavior

- Mission Control shows Rollback / Disable as 'RUNBOOK_ONLY'.
- The Build-Wiki card displays the owner/admin runbook.
- Mission Control does not execute stop/disable controls from the status card.
- Run Now remains the only wired Build-Wiki action in this hop.

Owner/Admin Runbook

```
""bash
systemctl --user stop opencloud-docs-farmer.service
systemctl --user disable --now opencloud-docs-farmer.timer
systemctl --user status opencloud-docs-farmer.service opencloud-docs-farmer.timer
""
```

Service / Runtime Behavior

- Runtime restarted on '127.0.0.1:3337'.
- Runtime PID after restart: '46361'.
- Production/local proof commit: '9ac74c9934425ecc900bfcf266135350dd3a84df'.
- No public local exposure was added.
- 'systemctl' is not available in this local runtime context, so live service/timer stop proof remains blocked by 'systemctl_command_not_found_in_local_runtime'.

Tests Run

- 'pnpm test src/app/api/bridge/brain-sync/build-wiki/status/route.test.ts'
- 'git diff --check'
- 'node scripts/check-protected-file-invariants.mjs'
- '.env' diff check
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'

Full test result:

- Test files: 157 passed
- Tests: 1326 passed

Runtime Proof

Proof artifact:

- 'runtime/day-36-farmer-rollback-disable-proof.json'

Verified:

- '/login' returned 200.
- Unauthenticated status route returned a protected response.
- Authenticated status route returned 200.
- 'rollback_disable.read_only=true'.
- 'execution_enabled=false'.
- 'writes_enabled=false'.
- 'disable_controls_enabled=false'.
- Runbook is exactly scoped to 'opencloud-docs-farmer.service' and 'opencloud-docs-farmer.timer'.
- No disable execution was attempted.
- No SMB/Fork 2/external farmer path was added.
- No raw local paths or secret-shaped values were exposed in the status payload.

Safety

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No broad connector execution.
- No SMB mount.
- No Fork 2.
- No external farmers.
- No second vault.
- No fake button: disable is runbook-only.

Commit / Push

Source commit:

“text
9ac74c9934425ecc900bfcf266135350dd3a84df

““

Push result:

““text
origin/to-knowledge-mc contains 9ac74c9934425ecc900bfcf266135350dd3a84df
““

Rollback

““bash
git revert 9ac74c9934425ecc900bfcf266135350dd3a84df
““

Remaining Blocker

““text
SERVICE_DOWN: systemctl_command_not_found_in_local_runtime
““

This does not block developer-side Day 36 closure because Mission Control now exposes the exact rollback/disable runbook safely and does not pretend it executed the stop/disable action.

Next Day Started

Day 37 â Brain Status Page is next.
