Day 38 - Obsidian / Local Knowledge 100% Closure

Date: 2026-05-09

Status: DEVELOPER-SIDE CLOSED WITH SERVICE_DOWN BLOCKER

Lane

Obsidian / local knowledge read adapter.

What Was Implemented

- Added canonical 'owner_status' to 'GET /api/bridge/agent-zero/obsidian'.
- The Obsidian adapter now reports:
 - 'SERVICE_DOWN' when the configured vault is missing or unreadable.
 - 'READY' when the vault is visible for safe read-only work.
 - 'BLOCKED' for invalid or unsupported adapter actions.
- Added no-fake-button contracts for Obsidian read-only controls and Bridge-gated write actions.
- Removed owner-facing copy that incorrectly implied the Brain / Obsidian vault was live or syncing.

Files Changed

- 'src/app/api/bridge/agent-zero/obsidian/route.ts'
- 'src/app/api/bridge/agent-zero/obsidian/route.test.ts'
- 'src/app/api/bridge/button-contracts/route.ts'
- 'src/lib/button-contracts-route.test.ts'
- 'src/app/viral-crawl/page.tsx'

Routes / Endpoints Changed

- 'GET /api/bridge/agent-zero/obsidian'
 - Status/search/read/summarize responses now include 'owner_status'.
 - Vault missing/unreadable remains a truthful blocker, not a success claim.
- 'GET /api/bridge/button-contracts'
 - Adds Obsidian adapter status/search/read/summarize as read-only controls.
 - Adds Obsidian write actions as owner approval / Bridge Session gated.

UI Behavior

- Obsidian status is no longer presented as implicitly live.
- Video Intelligence copy now says Obsidian writes remain blocked until the queue/UI surface and Bridge approval path are approved.
- Obsidian writes are represented as approval-gated actions, not live buttons.

Service / Runtime Behavior

- Runtime restarted after source commits.
- Runtime PID: '57095'
- Runtime bind: '127.0.0.1:3337'
- Runtime HEAD: '1ae5260'
- No public local exposure added.

Runtime Proof

Proof artifact: 'runtime/day-38-obsidian-local-knowledge-proof.json'

Live route results:

Check	Result
'/login'	200

```
| unauthenticated '/api/bridge/agent-zero/obsidian' | 401 |
| authenticated Obsidian status | 200, 'owner_status=SERVICE_DOWN' |
| authenticated Obsidian search | 400, 'owner_status=SERVICE_DOWN' |
| authenticated Obsidian read missing | 404, 'owner_status=SERVICE_DOWN' |
| unsupported Obsidian action | 400, 'owner_status=BLOCKED' |
| authenticated Brain Sync status | 200 |
| authenticated button contracts | 200 |
| unauthenticated '/gateway/brain' | 307 to '/login' |
```

Proof artifact scan:

- Raw path visible: false
- Secret-shaped value visible: false

Tests Run

- 'git diff --check' - passed
- 'pnpm run typecheck' - passed
- 'pnpm run build' - passed
- 'pnpm test' - passed, 159 files / 1331 tests
- 'node scripts/check-button-contract-routes.mjs' - passed
- 'node scripts/check-button-contract-live-status.mjs http://127.0.0.1:3337' - passed, 54 endpoints checked, 1 allowed skip
- 'node scripts/check-protected-file-invariants.mjs' - passed
- Staged secret scan - passed, 0 matches
- '.env' staged diff check - clean

Blocker

'SERVICE_DOWN: obsidian_vault_missing_or_unreadable'

The configured Obsidian vault is not visible/readable from the Mission Control runtime context. Developer-side behavior is complete: the route, UI copy, button contracts, tests, and proof harness now report the blocker honestly without exposing raw paths.

Commits / Push

- Source commit: '9ef9964' - 'fix(brain): report obsidian local knowledge blockers'
- Source follow-up: '1ae5260' - 'fix(brain): classify obsidian action blockers'
- Push result: pushed to 'origin/to-knowledge-mc'

Rollback

```
""bash
git revert 1ae5260 9ef9964
""
```

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure.
- No fake Obsidian live status.
- No raw local paths in proof artifact.
- No Obsidian writes enabled.

Next Day

Day 39 - Memory / Governance Guardrails has automatically started.
