

Phase 001 - Owner-Authenticated Browser Smoke Gate

Generated: 2026-05-07T16:40:49-04:00

Result

Phase 001 status: ****BLOCKED / FAIL** for full acceptance.**

Reason: Codex does not have a live owner/admin browser session or owner credentials. I can verify login availability, unauthenticated protections, and backend route health, but I cannot honestly mark owner-authenticated browser smoke as passed without the owner/admin session.

Routes Tested Without Owner Session

Route	Result	Meaning
--- --- ---		
/login`	HTTP 200	Login page is reachable.
/gateway/agent-hub`	HTTP 307	Protected UI redirects unauthenticated users to login.
/api/gateway/status`	HTTP 401 unauthenticated	API is protected.
/api/bridge/agent-zero/status`	HTTP 401 unauthenticated	Agent Zero bridge is protected.
/api/bridge/hermes/status`	HTTP 401 unauthenticated	Hermes bridge is protected.

Authenticated Backend Health Available Through API Key

Route	HTTP	Result
--- --- ---		
/api/gateway/status`	200	Gateway status read-only route works.
/api/gateway/registry`	200	Gateway registry returns 54 nodes.
/api/gateway/agent-hub/status`	200	Agent Hub status returns 5 agents.
/api/gateway/agent-hub/agents`	200	Agent roster returns 5 agents.
/api/bridge/agent-zero/status`	200	Agent Zero status route works.
/api/bridge/agent-zero/test-chat`	200	`agent_zero_called:true`, execution/writes disabled.
/api/bridge/hermes/status`	200	Hermes status route works.
/api/bridge/hermes/test-chat`	503	Safe blocker: `hermes_safe_live_chat_adapter_not_configured`.

Owner-Authenticated Browser Items Not Yet Proven

Required item	Current truth
--- ---	
Owner/Admin user confirmed	No, not independently available to Codex.
Dashboard opens after login	Not proven in this gate.
Main navigation loads after login	Not proven in this gate.
Gateway page loads after login	Not proven in this gate.
Agent Hub route loads after login	Not proven in this gate.
Agent Zero page smoke after login	Not proven in browser; backend route works.
Hermes page smoke after login	Not proven in browser; backend route works with safe blocker on chat.
SpaceAgent Playwright page smoke after login	Not proven in browser; backend status route works.
Mission Control dashboard no fatal console errors	Not proven in authenticated browser session.
Screenshot/snapshot evidence	Not available without authenticated browser session.

Security Confirmation

- No secrets were printed.
- No credentials were requested from the owner.
- No auth bypass was attempted.
- No `.env`` files were changed.
- No public exposure was added.
- No external writes occurred.

Exact Blocker

``owner_authenticated_browser_session_unavailable_to_codex``

Next Safe Work

Proceed to Phase 002 CSP and UI hygiene using unauthenticated login-page evidence and source inspection. Return to Phase 001 when a real owner/admin browser session is available for authenticated smoke verification.

Rollback

This phase adds report artifacts only. Rollback command after commit: ``git revert <phase-001-commit>``.
