

Phase 12 - Build-Wiki / Farmer Fork 1 Report

Generated: 2026-05-07T21:10:12-04:00

Result

****PARTIAL GO / SAFE AND GATED****

Build-Wiki / Farmer remains safely scoped under OpenClaw+. Fork 1 timer is active, the one-shot service is inactive with last result success, and SMB/Fork 2 is blocked because no SMB mount is present. No farmer execution was started in this phase because no active Bridge Session was proven.

Systemd Status

Check	Result
Legacy timer unit	opencloud-docs-farmer.timer
Timer state	active / waiting
Next timer run	Thu 2026-05-07 21:37:17 EDT
Legacy one-shot service	opencloud-docs-farmer.service
Service state	inactive / dead
Last service result	success
ExecMainStatus	0
SMB/Fork 2 mount	no
Farmer started by this phase	no

Owner-facing architecture remains ****OpenClaw+ / Build-Wiki / Farmer****. The legacy unit name is preserved only because it is the literal systemd service name.

Route Protection Smoke

Unauthenticated route checks after Mission Control restart:

Route	Result	Meaning
GET /api/bridge/build-wiki/status	401	protected
GET /api/bridge/build-wiki/run-now	401	protected
GET /api/gateway/nodes/build-wiki-farmer	401	protected

Policy Tests

Test	Result
src/lib/gateway-policy.test.ts	9 passed
src/lib/agent-zero-bridge-session.test.ts	8 passed

Combined focused tests	17 passed
------------------------	-----------

Execution Rule

The only approved execution target for Run Now remains:

```
`systemctl --user start opencloud-docs-farmer.service`
```

That command was **not run** because Bridge Session activation was not proven in this worker context.

Security Confirmation

- No SMB mount.
- No Fork 2.
- No external farmer execution.
- No Gmail/Slack/YouTube/Web farmers.
- No ``.env`` changes.
- No secrets printed.
- No Build-Wiki/Farmer disablement or deletion.

Updated Percentage

System	Previous	Updated
Build-Wiki / Farmer	70% PARTIAL / gated	74% PARTIAL GO / gated

Exact Remaining Blockers

- ``bridge_session_required_for_buildwiki_run_now``
- ``owner_authenticated_status_route_required``
- ``smb_fork2_blocked_no_mount_no_approval``

Exact Next Step

Open an owner-approved Bridge Session with explicit Build-Wiki Fork 1 scope, then run only the exact legacy service command and audit the result.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-12-commit>`
```
