

day-74-agent-zero-dispatcher-integration

Day 74 - Agent Zero + Dispatcher Integration

Status: DEVELOPER-SIDE CLOSED

Blocker class: NONE

Started from commit: 44e5e1a2b8b4985133c1ce2a0706616fe676f30e

Runtime proof base: <http://127.0.0.1:3337>

Proof artifact: runtime/day-74-agent-zero-dispatcher-integration-proof.json

Lane

Day 74 closes the Agent Zero + Dispatcher integration work package. Agent Zero is exposed as the canonical final commander through a protected Gateway dispatcher endpoint. This is a read-only planning/proof path. It does not execute owner requests, does not enable writes, does not bypass Bridge Session, and does not change Tony, Telegram, memory, voice, or governance behavior.

What Was Implemented

- Added a Gateway dispatcher planner for Agent Zero.
- Added protected endpoint 'GET /api/gateway/dispatcher/agent-zero' for Agent Zero dispatcher status.
- Added protected endpoint 'POST /api/gateway/dispatcher/agent-zero' for safe route planning from an owner request.
- Added structured audit-event output: 'agent_zero.dispatcher.route_planned'.
- Confirmed protected actions such as Build-Wiki Run Now remain Bridge-gated and non-executing.
- Extended Gateway request sanitization to redact macOS user home paths from owner-visible route plans.

Files Changed

- 'src/lib/gateway-agent-zero-dispatcher.ts'
- 'src/lib/gateway-agent-zero-dispatcher.test.ts'
- 'src/app/api/gateway/dispatcher/agent-zero/route.ts'
- 'src/app/api/gateway/dispatcher/agent-zero/route.test.ts'
- 'src/lib/gateway-route-planner.ts'
- 'runtime/day-74-agent-zero-dispatcher-integration-proof.json'
- 'runtime/day-74-agent-zero-dispatcher-integration.md'
- 'runtime/day-74-agent-zero-dispatcher-integration.pdf'

Routes / Endpoints Changed

- Added 'GET /api/gateway/dispatcher/agent-zero'
- Added 'POST /api/gateway/dispatcher/agent-zero'

Both routes require viewer authentication through existing 'requireRole' policy.

UI Behavior

No Mission Control or Gateway designer HTML/CSS/class names were changed. No Gateway visual redesign occurred in this day. The new endpoint gives Gateway, Agent Hub, and future dispatcher UI a truthful Agent Zero dispatcher status and route-plan source.

Service / Runtime Behavior

A fresh standalone Mission Control runtime was started at '127.0.0.1:3337' from the current build. Runtime proof confirmed:

- Agent Zero is commander: true.
- Final commander is 'agent_zero'.
- Normal owner request creates a safe route plan with Agent Zero in the route.
- Protected Build-Wiki request requires Bridge Session.
- 'execution_enabled:false'.
- 'writes_enabled:false'.
- 'external_writes_enabled:false'.
- 'dispatch_executed:false'.
- Audit event is emitted as data, not as a write side effect.
- Synthetic secret/path probe returned safe redacted output.

Tests / Checks Run

- 'git diff --check' - PASS

- 'pnpm run typecheck' - PASS
- 'pnpm run build' - PASS
- 'pnpm exec vitest run src/lib/gateway-agent-zero-dispatcher.test.ts src/app/api/gateway/dispatcher/agent-zero/route.test.ts' - PASS, 2 files / 6 tests
- 'pnpm test' - PASS, 195 files / 1468 tests
- 'MISSION_CONTROL_BASE_URL=http://127.0.0.1:3337 node scripts/protected-route-smoke-contract.mjs' - PASS, 41 routes checked
- 'node scripts/check-protected-file-invariants.mjs' - PASS
- 'node scripts/secret-scan-contract.mjs' - PASS
- 'node scripts/raw-exposure-scan-contract.mjs' - PASS
- '.env' status/diff check - PASS, no changes

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No external writes.
- No Zapier writes.
- No SMB/Fork 2.
- No Bridge Session bypass.
- No fake Done / fake GO / fake live execution.
- Agent Zero remains commander.

Deploy / Restart / Smoke Result

Local standalone proof runtime was restarted safely on '127.0.0.1:3337' with PID recorded during proof as 37425. This was a local proof runtime, not a public exposure. Production restart/deploy is not claimed in this Day74 report.

Rollback Command

After commit:

```
""bash
git revert <day_74_commit_sha>
""
```

Commit / Push

Pending at report creation. To be filled by git history after commit and push.

Next Day Started

Day 75 - Hermes + Dispatcher Integration starts next. The Day75 objective is to expose Hermes through the dispatcher with truthful provider/proof states, safe audit data, and no writes unless Bridge Session allows.
