Day 01 - Agent Zero 100% Closure

Date: 2026-05-09

Lane: Agent Zero

Status: CREDENTIAL_GATED developer-side closure

Blocker class: CREDENTIAL_GATED

Summary

Day 01 is closed on the developer side, but it is not a live GO claim. Agent Zero now has explicit HTTP health detection, canonical closure status, and a safe proof packet on the authenticated status route. The local runtime proof shows Agent Zero health is reachable and Docker is not required, but authenticated Agent Zero external API chat remains gated by missing Agent Zero API auth in this local runtime context.

Implemented

- Replaced single hardcoded health assumption with an HTTP health endpoint probe sequence:
 - 'AGENT_ZERO_HEALTH_URL' when configured.
 - 'AGENT_ZERO_HEALTH_PATHS' when configured.
 - '/api/health'.
 - '/health'.
 - '/api/status'.
- Made the probe contract explicit:
 - 'probe_strategy: http_health_endpoints'.
 - 'docker_required: false'.
 - 'docker_status: not_checked'.
 - 'checked_endpoints'.
 - 'selected_endpoint'.
- Added Agent Zero canonical closure status:
 - 'LIVE'.
 - 'CREDENTIAL_GATED'.
 - 'SERVICE_DOWN'.
 - 'BLOCKED'.
- Added an Agent Zero proof packet:
 - timestamp.
 - runtime commit.
 - route/service checked.
 - result.
 - blocker.
 - blocker class.
 - audit pointer.
 - rollback command.
 - no-secrets and no-raw-path flags.
- Updated '/api/bridge/agent-zero/status' to return Day 01 closure metadata.
- Updated the bridge providers fallback record to keep the same canonical proof shape when Agent Zero status probing fails.
- Updated the general health check route to use configured Agent Zero base URL plus '/api/health' instead of hardcoding a page URL.

Files Changed

- 'src/lib/agent-zero-bridge.ts'
- 'src/lib/agent-zero-bridge.test.ts'
- 'src/app/api/bridge/agent-zero/status/route.ts'
- 'src/app/api/bridge/providers/route.ts'
- 'src/app/api/health-check/route.ts'

Routes Changed

- 'GET /api/bridge/agent-zero/status'
- Adds 'agent.canonical_status'.

- Adds 'agent.blocker_class'.
- Adds 'runtime.detection_strategy'.
- Adds 'runtime.checked_endpoints'.
- Adds 'runtime.selected_endpoint'.
- Adds 'runtime.docker_required=false'.
- Adds 'closure.proof_packet'.
- 'GET /api/bridge/providers'
- Fallback Agent Zero record now preserves canonical status and proof packet fields.
- 'GET /api/health-check'
- Agent Zero service check now uses the configured Agent Zero base URL and '/api/health'.

UI Behavior

Agent Hub still shows Agent Zero in the production roster from Gateway registry truth. No UI redesign was performed. No fake buttons were added. Agent Hub status route remained live and returned:

- 'agents_total: 5'
- Agent Zero visible
- 'mock_data_used: false'
- 'raw_paths_exposed: false'
- 'secrets_exposed: false'

Runtime Proof

Local standalone smoke was run on '127.0.0.1:3337' only. No public local exposure was added.

Authenticated route smoke used a temporary local process-level API key. No '.env' file was modified.

Results:

- '/login': HTTP 200.
- Unauthenticated 'GET /api/bridge/agent-zero/status': HTTP 401.
- Authenticated 'GET /api/bridge/agent-zero/status': HTTP 200.
- Agent Zero status route result:
 - 'ok: true'
 - 'canonical_status: CREDENTIAL_GATED'
 - 'blocker_class: CREDENTIAL_GATED'
 - 'health: true'
 - 'docker_required: false'
 - 'closure: CREDENTIAL_GATED'
 - 'mission_control_auth_weakened: false'
- Authenticated 'GET /api/gateway/agent-hub/status': HTTP 200.

The temporary local standalone server PID was '94309'; it was stopped after smoke.

Tests And Checks

- 'git diff --check': PASS.
- 'pnpm run typecheck': PASS.
- 'pnpm run build': PASS.
- 'pnpm test': PASS, 138 files / 1255 tests.
- Focused Agent Zero tests: PASS, 16 tests.
- Focused Agent Hub tests: PASS, 3 tests.
- 'node scripts/check-protected-file-invariants.mjs': PASS.
- Staged secret scan: PASS, no matches.
- '.env' diff check: PASS, no '.env' changes staged or present in git status.
- Connector action contract check with a temporary local Mission Control key: PASS.
- Bridge capability matrix live check with a temporary local Mission Control key: PASS.

Non-blocking unrelated contract script findings:

- 'node scripts/check-button-contract-live-status.mjs' reached the local server but still reports existing non-Agent-Zero blockers:
- Build-Wiki logs sample returns 'farmer_log_not_found'.
- Build-Wiki Run Now sample returns 'approval_persistence_not_applied'.
- Brain Sync status returns 'claudeclaw_dashboard_token_missing'.

These are not Day 01 Agent Zero health/proof regressions. They remain assigned to later Bridge/Build-Wiki/Brain work packages.

Service / Deploy

Production restart was not performed during this Day 01 code commit. The source change affects Mission Control, so production should be rebuilt/restarted after push when applying the Day 01 commit to the production runtime.

Local standalone build and route smoke completed successfully on localhost only.

Proof Artifact

This report and its PDF are the Day 01 proof artifact:

- 'runtime/day-01-agent-zero-100-closure.md'
- 'runtime/day-01-agent-zero-100-closure.pdf'

Remaining Blocker

Blocker: 'agent_zero_external_api_key_missing'

Classification: 'CREDENTIAL_GATED'

Meaning: Mission Control can reach Agent Zero health over HTTP and no Docker runtime is required, but this local runtime cannot complete Agent Zero authenticated external API chat until an approved Agent Zero API key source is available to the Mission Control process.

Rollback

Code rollback:

```
""bash
git revert Odd1ebf8893c4f000d4ed2ed02978e5f422a610a
""
```

Report rollback:

```
""bash
git revert <day-01-report-commit-sha>
""
```

Commit / Push

Code commit: 'Odd1ebf8893c4f000d4ed2ed02978e5f422a610a'

Report commit: pending

Push result: pending

Next Day

Day 02 starts automatically after this report commit and push: Hermes 100% closure.
