Day 55 â AgentMail Readiness Closure

Date: 2026-05-10

Status: DEVELOPER-SIDE CLOSED / CREDENTIAL_GATED

Lane: AgentMail readiness

Objective

Close the AgentMail readiness lane without pretending email send is live. The day gate is satisfied for developer-side readiness because Mission Control now exposes a protected, credential-safe readiness endpoint and a runtime guard proves the route does not send mail or fake completion.

Implementation

Files changed:

- 'src/lib/agentmail-readiness.ts'
- 'src/lib/agentmail-readiness.test.ts'
- 'src/app/api/bridge/agent-zero/agentmail/status/route.ts'
- 'scripts/check-agentmail-readiness-guard.mjs'
- 'runtime/day-55-agentmail-readiness-guard-smoke.json'
- 'runtime/day-55-route-rendering-smoke.json'
- 'runtime/day-55-agentmail-readiness-closure.md'
- 'runtime/day-55-agentmail-readiness-closure.pdf'

Route added:

- 'GET /api/bridge/agent-zero/agentmail/status'

Behavior added:

- Authenticated AgentMail readiness response.
- Unauthenticated calls return '401'.
- Credential/config presence is reported as yes/no only.
- No AgentMail key or token value is printed.
- No email is sent by the readiness route.
- Outgoing send is classified as Bridge-gated with required scope 'agentmail.send'.
- Canonical status follows the owner-facing contract:
 - 'CREDENTIAL_GATED' when AgentMail credential is missing.
 - 'BLOCKED' when a credential exists but backend route/config is missing.
 - 'OWNER_GATED' when backend exists but no domain/recipient allow-list exists.
 - 'READY' only when credential, backend, and allow-list are present.

Current runtime truth:

- 'canonical_status': 'CREDENTIAL_GATED'
- 'blocker_class': 'CREDENTIAL_GATED'
- 'blocker_kind': 'CREDENTIAL_GATED'
- 'blocked_reason': 'agentmail_credential_required'
- 'credential_present': 'false'
- 'incoming_status': 'blocked'
- 'outgoing_status': 'blocked'
- 'required_scope': 'agentmail.send'
- 'writes_enabled': 'false'
- 'no_email_sent': 'true'
- 'no_fake_done': 'true'

Runtime Proof

Runtime bind:

- '127.0.0.1:3337'

Runtime PID after build/restart:

- '32057'

AgentMail readiness guard:

- Command: 'MISSION_CONTROL_API_KEY=<redacted> node scripts/check-agentmail-readiness-guard.mjs http://127.0.0.1:3337 runtime/day-55-agentmail-readiness-guard-smoke.json'
- Result: PASS
- Checked: 2
- Failures: 0

Route rendering smoke:

- Command: 'MISSION_CONTROL_API_KEY=<redacted> node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337'
- Result: PASS
- Routes checked: 46
- Designer pages checked: 8
- Failures: 0

Validation

Red/green test cycle:

- Initial focused test failed because 'src/lib/agentmail-readiness.ts' did not exist.
- Implementation added the readiness contract.
- Focused test passed: 'src/lib/agentmail-readiness.test.ts' â 3 tests.

Commands run:

- 'node --check scripts/check-agentmail-readiness-guard.mjs' â PASS
- 'pnpm exec vitest run src/lib/agentmail-readiness.test.ts --pool=forks --no-file-parallelism -reporter verbose' â PASS, 3 tests
- 'pnpm run typecheck' â PASS
- 'pnpm run build' â PASS
- 'pnpm test' â PASS, 180 files / 1409 tests
- 'git diff --check' â PASS
- 'node scripts/check-protected-file-invariants.mjs' â PASS
- '.env diff check' â PASS

Safety

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No email sent.
- No fake sent status.
- No fake Done.
- No raw local paths exposed.
- No Zapier writes.
- No SMB/Fork 2.
- No external farmers.

Blockers

Developer-side readiness implementation:

- Blocker class: 'NONE'

Live AgentMail readiness:

- Blocker class: 'CREDENTIAL_GATED'
- Exact blocker: 'agentmail_credential_required'

AgentMail send proof:

- Blocker class: 'OWNER_GATED' until an approved Bridge Session scope exists and a permitted domain/recipient allow-list is configured.

Rollback

Rollback command after commit:

- 'git revert <day55_agentmail_readiness_commit_sha>'

Commit / Push

Commit hash:

- Pending at report creation.

Push result:

- Pending at report creation.

Next Day

Day 56 â AgentMail Delivery Proof has automatically started after Day 55 developer-side closure.

Day 56 must keep send behavior Bridge-gated and must not claim sent unless a real allowed-domain send succeeds.
