

Day 6 Phase 055 - Mini-Agent Factory Activation Gate

****Objective****

Verify mini-agent factory contracts: supervisor, scope, allowed tools, forbidden tools, TTL, output contract, kill/expire, and audit trail.

****Actions****

- Ran focused mini-agent contract tests.
- Queried GET /api/gateway/mini-agents.
- Submitted one authenticated proposal-only mini-agent request.
- Verified activation and writes remain blocked.

****Proof****

- Focused mini-agent/sanitizer tests: 20 passed.
- Full Mission Control tests: 1,241 passed.
- GET /api/gateway/mini-agents: 200 authenticated, 401 unauthenticated, no raw paths, no secret-shaped values.
- POST /api/gateway/mini-agents: 200 authenticated with `accepted_for_activation=false`.
- Blocker returned:
`mini_agent_activation_requires_bridge_session_and_registered_runtime_adapter`.

****Decision****

PARTIAL GO / GATED. Proposal factory is production-visible and protected; runtime activation is intentionally disabled until Bridge Session and runtime adapter exist.

****Blockers****

- OpenClaw+ doctor remains unhealthy because sanitized doctor output still reports profile/session/config warnings; automatic doctor fix was not run because it can alter auth/session state.
- OpenClaw+ CLI status still reports Tony as default/active in legacy runtime/session context. Telegram route work previously maps owner messages to Agent Zero, but legacy OpenClaw+ default identity still needs Tony quarantine follow-up.
- OpenClaw+ update available from 2026.4.14 to 2026.5.7; not applied during Day 6 because it is a provider/runtime upgrade decision.
- Build-Wiki Run Now remains gated by Bridge Session; no manual farmer execution was performed.
- Mini-agent activation remains gated; no mini-agent runtime execution or write capability was enabled.

****Files Changed****

- `src/app/api/openclaw/doctor/route.ts`
- `src/app/api/bridge/brain-sync/status/route.ts`
- `src/app/api/bridge/brain-sync/build-wiki/files/route.ts`

- src/app/api/bridge/brain-sync/build-wiki/logs/route.ts
- Operational monitor script: expected configured-agent count updated from 12 to 13 with timestamped backup health-monitor.sh.bak-20260507-233533.

****Tests And Validation****

- Mission Control focused Day 6 tests: 20 passed across sanitizer and mini-agent suites.
- Mission Control typecheck: passed.
- Mission Control build: passed.
- Mission Control full test suite: 134 files passed, 1,241 tests passed.
- ClaudeClaw/OpenClaw+ typecheck: passed.
- ClaudeClaw/OpenClaw+ build: passed.
- ClaudeClaw/OpenClaw+ design-lock verify: passed.
- ClaudeClaw/OpenClaw+ test suite under Node 24: 61 files passed, 1,215 tests passed, 4 skipped.
- ClaudeClaw/OpenClaw+ gauntlet: 370/370 passed.

****Services****

- Mission Control standalone: active on loopback after controlled respawn, PID 2754961, restart timestamp Thu May 7 23:42:28 2026.
- OpenClaw+ gateway service: active/running, local loopback only.
- OpenClaw+ health monitor: oneshot completed successfully after repair.
- ClaudeClaw service: active/running.
- Build-Wiki / Farmer timer: active/waiting.
- opencloud-docs-farmer.service: inactive after last successful scheduled run; not manually started by Codex.

****Security / Hard Rules****

No secrets, tokens, auth files, API keys, .env values, or raw local filesystem paths were printed in owner-facing output or committed. Staged scan passed before the code commit; route payload scans were clean after restart.

Confirmed again: no .env change, no SMB/Fork 2, no Zapier writes, no HeyGen generation, no public local service exposure, no external farmer execution, no auth weakening, no deletes, and no fake Done.

****Commits****

- Code fix pushed: 404f08d fix(gateway): redact brain and openclaw diagnostics.
- Day 6 report artifact commit: pending.

****Rollback****

- Code rollback: `git revert 404f08d`.
- Operational health monitor rollback: restore backup health-monitor.sh.bak-20260507-233533 over the active monitor script, then rerun the health monitor.

****Updated Percentages****

Item Result
--- ---
OpenClaw+ 88% PARTIAL GO

Mini-Agent OS	88% PARTIAL GO / GATED
Build-Wiki / Farmer	78% PARTIAL GO / GATED
Gateway / Agent Hub	93% PARTIAL GO
Overall ecosystem	93% PARTIAL GO

****Next Step****

Day 8 or Day 9 should prove Bridge Session lifecycle before any real mini-agent activation.

Report generated: 2026-05-07 23:45 EDT.
