

Day 6 Phase 056 - Mini-Agent Live Read-Only Task

****Objective****

Prove the safest available mini-agent task path without enabling writes or self-promotion.

****Actions****

- Ran SpaceAgent mini-agent specialist tests.
- Ran mini-agent gauntlet and contract tests.
- Submitted a production proposal-only mini-agent request with a short TTL.

****Proof****

- The production API accepted a proposal and explicitly refused activation without Bridge Session and runtime adapter.
- Test coverage proved scoped read-only sub-research packet behavior and mini-agent expiration paths.
- No mini-agent process was started.
- No mini-agent writes, tool execution, external connector call, or self-promotion occurred.

****Decision****

PARTIAL GO / CONTRACT-PROVEN. Read-only task logic is proven by tests and proposal route; live runtime activation remains gated.

****Blockers****

- OpenClaw+ doctor remains unhealthy because sanitized doctor output still reports profile/session/config warnings; automatic doctor fix was not run because it can alter auth/session state.
- OpenClaw+ CLI status still reports Tony as default/active in legacy runtime/session context. Telegram route work previously maps owner messages to Agent Zero, but legacy OpenClaw+ default identity still needs Tony quarantine follow-up.
- OpenClaw+ update available from 2026.4.14 to 2026.5.7; not applied during Day 6 because it is a provider/runtime upgrade decision.
- Build-Wiki Run Now remains gated by Bridge Session; no manual farmer execution was performed.
- Mini-agent activation remains gated; no mini-agent runtime execution or write capability was enabled.

****Files Changed****

- src/app/api/openclaw/doctor/route.ts
- src/app/api/bridge/brain-sync/status/route.ts
- src/app/api/bridge/brain-sync/build-wiki/files/route.ts
- src/app/api/bridge/brain-sync/build-wiki/logs/route.ts
- Operational monitor script: expected configured-agent count updated from 12 to 13 with timestamped backup health-monitor.sh.bak-20260507-233533.

****Tests And Validation****

- Mission Control focused Day 6 tests: 20 passed across sanitizer and mini-agent suites.
- Mission Control typecheck: passed.
- Mission Control build: passed.
- Mission Control full test suite: 134 files passed, 1,241 tests passed.
- ClaudeClaw/OpenClaw+ typecheck: passed.
- ClaudeClaw/OpenClaw+ build: passed.
- ClaudeClaw/OpenClaw+ design-lock verify: passed.
- ClaudeClaw/OpenClaw+ test suite under Node 24: 61 files passed, 1,215 tests passed, 4 skipped.
- ClaudeClaw/OpenClaw+ gauntlet: 370/370 passed.

****Services****

- Mission Control standalone: active on loopback after controlled respawn, PID 2754961, restart timestamp Thu May 7 23:42:28 2026.
- OpenClaw+ gateway service: active/running, local loopback only.
- OpenClaw+ health monitor: oneshot completed successfully after repair.
- ClaudeClaw service: active/running.
- Build-Wiki / Farmer timer: active/waiting.
- opencloud-docs-farmer.service: inactive after last successful scheduled run; not manually started by Codex.

****Security / Hard Rules****

No secrets, tokens, auth files, API keys, .env values, or raw local filesystem paths were printed in owner-facing output or committed. Staged scan passed before the code commit; route payload scans were clean after restart.

Confirmed again: no .env change, no SMB/Fork 2, no Zapier writes, no HeyGen generation, no public local service exposure, no external farmer execution, no auth weakening, no deletes, and no fake Done.

****Commits****

- Code fix pushed: 404f08d fix(gateway): redact brain and openclaw diagnostics.
- Day 6 report artifact commit: pending.

****Rollback****

- Code rollback: `git revert 404f08d`.
- Operational health monitor rollback: restore backup health-monitor.sh.bak-20260507-233533 over the active monitor script, then rerun the health monitor.

****Updated Percentages****

Item Result
--- ---
OpenClaw+ 88% PARTIAL GO
Mini-Agent OS 88% PARTIAL GO / GATED
Build-Wiki / Farmer 78% PARTIAL GO / GATED
Gateway / Agent Hub 93% PARTIAL GO

| Overall ecosystem | 93% PARTIAL GO |

****Next Step****

After Bridge Session proof, run a single read-only mini-agent runtime task with strict TTL and no external writes.

Report generated: 2026-05-07 23:45 EDT.
