

day-66-authenticated-route-smoke

Day 66 â Authenticated Route Smoke Closure

Date: 2026-05-11

Lane: Runtime / protected owner-auth proof

Status: DEVELOPER-SIDE PASS, OWNER_GATED

Blocker class: OWNER_GATED

Blocker: owner_authenticated_browser_session_required

Scope

Day 66 adds a safe authenticated route-smoke harness for Mission Control, Gateway, Agent Hub, Bridge, connector, agent, and report surfaces. The harness does not store cookies, does not write response bodies, and does not claim owner visual proof unless an owner session is supplied and every authenticated probe passes.

Implementation

Files changed:

- scripts/authenticated-route-smoke-contract.mjs
- src/lib/authenticated-route-smoke-contract.test.ts
- runtime/day-66-authenticated-route-smoke.json
- runtime/day-66-authenticated-route-smoke.md
- runtime/day-66-authenticated-route-smoke.pdf

Routes inventoried:

- Pages: /tkmc, /gateway, /gateway?tab=agent-hub, /gateway?tab=paperclip, /gateway?tab=bridge, /gateway?tab=dispatcher, /gateway?tab=governor, /gateway/status, /gateway/space-agent, /gateway/b, /rain, /agents, /agent-network, /settings/tkmc, /settings/tkmc/integrations, /settings/tkmc/security.
- APIs: /api/runtime/health, /api/status?action=dashboard, /api/gateway/status, /api/gateway/agent-hub/status, /api/gateway/navigation?route=/gateway/agent-hub, Bridge approval/connector endpoints, Agent Zero, Hermes, Pi, Paperclip, Build-Wiki, delivery connector, Zapier, HeyGen, SpaceAgent browser, and YouTube status endpoints.

Safety Behavior

- Missing owner session closes as OWNER_GATED.
- Failed owner session closes as BLOCKED.
- Unreachable Mission Control /login probe closes as SERVICE_DOWN.
- owner_visual_proof_claimed is false unless authenticated smoke succeeds with session_kind=owner.
- Cookie values are not stored.
- Response bodies are not written.
- Unsafe text checks cover secret-like strings and raw local path exposure.

Runtime Proof

Command:

```
node scripts/authenticated-route-smoke-contract.mjs http://127.0.0.1:3337 > runtime/day-66-authenticated-route-smoke.json
```

Result summary:

- ok: true
- authenticated_smoke_proven: false
- owner_visual_proof_claimed: false
- blocker_class: OWNER_GATED
- blocker: owner_authenticated_browser_session_required
- /login status: 200
- Mission Control marker present: true
- unsafe text detected: false
- routes_checked: 0 because no owner cookie was supplied
- page inventory: 15
- API inventory: 21

Tests

Focused red/green tests added for:

- primary route inventory
- missing owner session owner-gated behavior
- service-down login probe classification
- page/API success classification
- provided-session failure behavior
- owner visual proof only when owner session smoke succeeds

Full validation is recorded in the final closeout after command execution.

Deploy / Restart

No production source route or runtime server code changed for Day 66. No deploy/restart is required for the harness itself. The local Mission Control runtime remained reachable at <http://127.0.0.1:3337> during proof.

Security Confirmation

No .env changes intended.

No secrets printed or stored.

No auth weakening.

No public exposure added.

No external writes.

No fake GO or owner visual proof claim.

Remaining Blocker

Owner-authenticated route proof requires an owner browser session or approved safe proof cookie injection.

Classification: OWNER_GATED.

Rollback

After commit, use:

git revert <day-66-commit-sha>

Next Day Started

After Day 66 commit/push, continue automatically to Day 67 â Secret Scan 100% Closure.
