

Phase 8 — OpenClaw+ Health Repair Report

Generated: 2026-05-08T00:28:31Z

Result

****Status:**** BLOCKED

Exact blocker: `openclaw\_cli\_not\_installed\_or\_not\_reachable`.

OpenClaw+ service/runtime evidence was checked. No destructive repair was run because the doctor CLI is not reachable from the non-interactive production environment. The already-confirmed safe config permission repair remains in place.

Service / Runtime Proof

Check	Result
claudeclaw.service` active	active
MainPID	1287
ActiveEnterTimestamp	Wed 2026-05-06 22:37:41 EDT
OpenClaw CLI reachable	false
Doctor status	not_reachable
Doctor summary	OpenClaw CLI is not installed or not reachable in the non-interactive PATH.

Config Safety Proof

Check	Result
OpenClaw+ config exists	true
Config mode	0o600
Config owner/mode status	owner_read_write_only
.env` modified	false
Agents/skills/memory/reports deleted	false

Mission Control Route Proof

Route	Auth state	HTTP	Result
GET /api/openclaw/doctor	unauthenticated	401	Unauthorized

Authenticated OpenClaw+ doctor route proof remains pending until an owner/operator admin session or approved route credential is available.

Repair Decision

No additional repair was applied. Installing or aliasing an OpenClaw CLI would be an environment/runtime change that needs a confirmed source package and should not be guessed. The safe next fix is to install or restore the expected OpenClaw+ doctor CLI path, then re-run the doctor and repair only named issues.

Guardrails Confirmed

- No ``.env`` file was modified.
- No OpenClaw+ agents, skills, memory, governance, runtime data, or reports were deleted.
- No service was disabled.
- No external write, SMB/Fork 2, farmer, Zapier, or HeyGen action occurred.
- OpenClaw+ remains the correct runtime/skills/agents/mini-agent execution layer.

Phase 8 Decision

Phase 8 remains ****BLOCKED**** with ``openclaw_cli_not_installed_or_not_reachable``.
