

MISSION CONTROL BUTTON HARDENING REPORT

Generated: 2026-05-08

OBJECTIVE

Begin the button-by-button hardening pass for Mission Control so visible actions are not fake, stale, or misleading.

Rule applied:

- A button may be live only when it maps to a real route.
- A read-only button may only call a read-only route.
- A protected action must be Bridge Session-gated or owner-approval-gated.
- A missing backend, missing credential, or unavailable integration must render as blocked/disabled with an exact blocker.
- No fake Done, fake live status, fake upload, fake send, or fake execution state is allowed.

SCOPE COMPLETED IN THIS SLICE

This slice focused on the newly updated Gateway / Agent Hub / SpaceAgent Browser Automation surface and the central Mission Control button contract registry.

CHANGES MADE

| File | Change |

|---|---|

| 'src/app/gateway/status/page.tsx' | Added a real read-only Gateway Status page so the Agent Hub header button no longer points at a loose route target. |

| 'src/lib/button-contracts-route.test.ts' | Added a route-contract test that fails if any LIVE or READ_ONLY button contract points at a missing API route. |

BUTTON CONTRACT STATUS

The existing 'GET /api/bridge/button-contracts' contract already classifies Mission Control actions into allowed states:

- 'LIVE'
- 'READ_ONLY'
- 'BACKEND_REQUIRED'
- 'CREDENTIAL_REQUIRED'
- 'OWNER_APPROVAL_REQUIRED'
- 'DISABLED'

The new test verifies:

- all 'LIVE' and 'READ_ONLY' API endpoints physically exist in the Next.js route tree;
- blocked, credential-required, owner-approval-required, or disabled actions are not executable;
- 'fake_success_allowed' is false for every contract.

CONCRETE ISSUE FOUND

| Issue | Fix |

|---|---|

| The Agent Hub header had a 'Gateway status' button targeting '/gateway/status', but no dedicated page existed at that route. | Added '/gateway/status' as a real read-only production status page. |

GATEWAY STATUS PAGE BEHAVIOR

The new '/gateway/status' page shows:

- Gateway status summary.
- Agent Zero status and blockers.
- Hermes status and blockers.
- Bridge / MCP status.
- OpenClaw+ / Build-Wiki / Farmer status.
- Button hardening rule.
- Safety confirmation.

It does not trigger writes, uploads, sends, Zapier, HeyGen, SMB, farmer execution, or connector execution.

VALIDATION

| Check | Result |

|---|---|

| Direct TypeScript check with local binary | PASS |

| Focused Vitest suite | PASS, 4 files / 10 tests |

| Production build with Next.js | PASS |

| '.env' changes | none |

| Secrets printed | no |

| Raw auth files printed | no |

| Fake buttons added | no |

Focused tests run:

- 'src/lib/button-contracts-route.test.ts'
- 'src/lib/gateway-agent-hub.test.ts'
- 'src/lib/space-agent-browser-automation.test.ts'
- 'src/app/gateway-route-alias.test.ts'

CURRENT BLOCKER

Production SSH currently requires a fresh Tailscale authorization check. Because of that, this slice can be pushed to the remote branch, but the live production host cannot be pulled/restarted/smoked by Codex until that authorization is restored.

Exact blocker:

'tailscale_ssh_reauthorization_required_for_production_restart_and_smoke'

WHAT I NEED FROM OWNER IF YOU WANT THIS LIVE IMMEDIATELY

Approve/complete the Tailscale SSH authorization prompt for the production host, then I can:

1. pull the pushed commit on production;
2. rebuild if needed;
3. restart Mission Control;
4. run authenticated route smoke;
5. run unauthenticated 401/403 smoke;
6. verify '/gateway/status', '/gateway/agent-hub', and the button contract route from production.

NO-SECRETS CONFIRMATION

- No tokens printed.
- No API keys printed.
- No auth files printed.
- No '.env' changes made.
- No SMB mount.
- No Fork 2.
- No Zapier writes.
- No HeyGen generation.
- No external farmers.
- No public local service exposure added.

UPDATED DECISION

Gateway / Agent Hub button hardening: ****PARTIAL GO****.

Reason: code-level route contract and local build/test proof passed, but live production restart/smoke is blocked by Tailscale SSH re-authorization.

EXACT NEXT STEP

After production SSH authorization is restored, deploy this button-hardening patch to the live host and run production smoke.
