

Day 97 - Production Deploy Final 100% Closure

- Lane: Production deploy final
- Status: DEVELOPER-SIDE CLOSED WITH LIVE LOCAL-ONLY DEPLOY PROOF
- Day 97 blocker classification: NONE
- Started from commit: f9c9fc114efe7dc4ce5fec65ce293b4f7147f7d2
- Closed at: 2026-05-12T06:39:00Z

What Was Implemented

Patched the standalone deploy proof harness so authenticated runtime probes use the active standalone runtime credential source first: '.next/standalone/.data/.auto-generated', then environment variables, then the source database fallback. The key is read only for the proof request and is not printed in logs or artifacts.

Deployed the current accepted standalone bundle to a localhost-only runtime on '127.0.0.1:3337' using the current 'to-knowledge-mc' commit. The first nohup/launchctl attempts did not persist under the Codex command boundary, so the accepted runtime was restarted in a detached 'screen' session named 'mc-day97' with the same local-only bind.

Files Changed

- scripts/check-standalone-deploy-proof.mjs
- runtime/day-97-production-deploy-final.md
- runtime/day-97-production-deploy-final.pdf
- runtime/day-97-production-deploy-final/inventory.json
- runtime/day-97-production-deploy-final/inventory.pdf
- runtime/day-97-production-deploy-final/deploy-standalone-output.txt
- runtime/day-97-production-deploy-final/screen-runtime-restart-output.txt
- runtime/day-97-production-deploy-final/runtime-listener-proof.json
- runtime/day-97-production-deploy-final/standalone-deploy-proof.json
- runtime/day-97-production-deploy-final/protected-route-smoke.json
- runtime/day-97-production-deploy-final/authenticated-route-smoke.json
- runtime/day-97-production-deploy-final/protected-file-invariants.json
- runtime/day-97-production-deploy-final/secret-scan.json
- runtime/day-97-production-deploy-final/raw-exposure-scan.json
- runtime/day-97-production-deploy-final/post-deploy-proof-summary.json

Runtime '.log' files were not staged.

Routes / Endpoints Changed

No application route behavior changed. The proof harness verifies the existing production deployment surface:

- /login
- /gateway
- /api/bridge/connector-readiness
- protected route-smoke inventory
- authenticated route-smoke inventory

UI Behavior

No UI, designer HTML, CSS, class names, or Gateway mock files were changed. The deploy proof confirms '/login' renders Mission Control, '/gateway' remains protected when unauthenticated, and static assets are served from the standalone bundle.

Service / Runtime Behavior

- Runtime mode: standalone Next.js bundle
- Bind: 127.0.0.1 only
- Port: 3337

- Runtime manager: detached 'screen' session 'mc-day97'
- Runtime PID: 1862
- Deployed commit: f9c9fc1
- Public local exposure added: false
- Static asset probe: PASS
- Authenticated connector readiness probe: PASS

Tests Run

- git diff --check: PASS
- .env diff check: PASS
- node --check scripts/check-standalone-deploy-proof.mjs: PASS
- pnpm run typecheck: PASS
- pnpm run build: PASS
- pnpm test: PASS, 209 files / 1517 tests
- Standalone deploy proof: PASS
- Protected route smoke: PASS
- Authenticated route smoke: PASS with blocker_class OWNER_GATED for owner-session browser proof followup
- Protected-file invariant scan: PASS
- Secret scan: PASS
- Raw exposure scan: PASS
- Runtime listener proof: PASS

Deploy / Restart / Smoke Result

Deployment completed against commit 'f9c9fc1'. The accepted live runtime is listening at 'http://127.0.0.1:3337' with PID '1862' and screen session 'mc-day97'. The deploy proof packet reports ok true and blocker_class NONE.

Authenticated owner browser proof remains intentionally deferred to Day 98 because no owner browser session was supplied. Day 97 did not fake owner-authenticated UI proof.

Proof Artifact

- runtime/day-97-production-deploy-final/standalone-deploy-proof.json
- runtime/day-97-production-deploy-final/protected-route-smoke.json
- runtime/day-97-production-deploy-final/authenticated-route-smoke.json
- runtime/day-97-production-deploy-final/runtime-listener-proof.json
- runtime/day-97-production-deploy-final/protected-file-invariants.json
- runtime/day-97-production-deploy-final/secret-scan.json
- runtime/day-97-production-deploy-final/raw-exposure-scan.json
- runtime/day-97-production-deploy-final/post-deploy-proof-summary.json
- runtime/day-97-production-deploy-final/inventory.json

Remaining Blocker

No Day 97 developer-side blocker remains. Owner-authenticated screenshot/video capture is Day 98 scope and is currently OWNER_GATED until an owner browser session is available.

Exact Day 97 blocker classification: NONE.

Rollback Command

```
screen -S mc-day97 -X quit; kill $(cat .next/standalone/server.pid 2>/dev/null) 2>/dev/null || true; git revert <day-97-production-deploy-final-commit>
```

Commit / Push

- Commit hash: pending at report creation
- Push result: pending at report creation

Next Day

Day 98 - Owner Authenticated Proof Packet starts automatically after this Day 97 commit and push
