Day 85 â Mission Control Movement

Phase 0-20 Inventory

- Branch: 'to-knowledge-mc'
- Latest commit at start: '2fd9a36'
- '.env' changes: none requested, none made
- Secret risk: no secrets inspected or emitted
- Scope: Mission Control/Gateway movement and scroll ownership only

Findings

- The approved Gateway mock pages are served raw from '/design/gateway/*.html'.
- 'GatewayShell.jsx' mounted those raw pages in an iframe, but the shell and iframe were both pinned to '100vh'.
- That made Gateway sub-tabs feel static/trapped because iframe height owned movement instead of the Mission Control main surface.
- The Day 85 fix must stay outside the approved mock HTML/CSS/class names.

Planned Fix

- Keep the designer mock pages raw and unchanged.
- Auto-size the same-origin iframe from its rendered document height.
- Disable iframe scrollbars and let Mission Control's '.main-solo' surface own page movement.
- Reset the Mission Control scroll position when switching Gateway sub-tabs.
- Add tests and runtime proof for iframe sizing and scroll ownership.

Implemented

- Updated 'public/designer-mission-control/src/gateway/GatewayShell.jsx' only.
- Did not modify approved mock HTML, CSS, or class names.
- Replaced the fixed 'height: 100%; min-height: 100vh' shell/frame trap with shell-level iframe auto-sizing.
- The iframe now:
 - loads the same raw '/design/gateway/*.html' assets,
 - uses 'scrolling="no"',
 - sizes to stable designer content,
 - keeps the Gateway sub-rail sticky,
 - lets Mission Control '.main-solo' own movement.
- Added a regression test in 'src/lib/mission-control-shell.test.ts' that rejects the old '100vh' trap and verifies the shell owns iframe sizing.

Runtime Proof

- Local proof server: 'http://127.0.0.1:3339' on loopback only; stopped after proof.
- Browser proof: 'runtime/day-85-mission-control-movement/proof.json'
- Screenshot: 'runtime/day-85-mission-control-movement/gateway-agent-hub-movement.png'
- Result:
 - page status: '200'
 - iframe source: '/design/gateway/Agent Hub.html'
 - iframe title: 'Gateway • Agent Hub'
 - iframe 'scrolling': 'no'
 - stable content height: '1813'
 - iframe client height: '1813'
 - Mission Control '.main-solo' scroll height/client height: '1915 / 713'
 - scroll proof: '.main-solo.scrollTop' changed from '0' to '520'
 - raw mock rendered: 'true'
 - frame fits stable content: 'true'

Route/Smoke Proof

- Protected route smoke: 'runtime/day-85-mission-control-movement/protected-route-smoke.json'

- 'ok: true'
- routes checked: '44'
- failures: '[]'
- Authenticated route smoke harness: 'runtime/day-85-mission-control-movement/authenticated-route-smoke.json'
- 'ok: true'
- blocker class: 'OWNER_GATED'
- owner visual proof claimed: 'false'
- blocker: 'owner_authenticated_browser_session_required'

Closure Ledger

- Lane: Mission Control movement
- Status: developer-side movement fix complete; owner-auth production visual retest remains gated
- Blocker class: 'OWNER_GATED'
- Files changed:
 - 'public/designer-mission-control/src/gateway/GatewayShell.jsx'
 - 'src/lib/mission-control-shell.test.ts'
 - 'runtime/day-85-mission-control-movement.md'
 - 'runtime/day-85-mission-control-movement/proof.json'
 - 'runtime/day-85-mission-control-movement/protected-route-smoke.json'
 - 'runtime/day-85-mission-control-movement/authenticated-route-smoke.json'
 - 'runtime/day-85-mission-control-movement/gateway-agent-hub-movement.png'
- Routes/endpoints changed: none
- UI behavior: Gateway mock remains raw/unchanged; Mission Control owns page movement; Gateway i frame no longer traps vertical scroll.
- Service/runtime behavior: no service behavior changed; proof server started on loopback and stopped.
- Deploy/restart result: no production restart performed in this lane.
- Proof artifact: 'runtime/day-85-mission-control-movement/proof.json'
- Remaining blocker: owner-authenticated production visual retest requires an owner browser session.
- Exact blocker classification: 'OWNER_GATED'

Rollback

```
""bash
git revert <day-85-commit>
""
```
