

Phase 16 — Brain Read Adapter Proof

Generated: 2026-05-07 21:16:14

Result

****PARTIAL GO.**** Brain systems are visible through Mission Control/Gateway contracts and safe adapter tests passed for Obsidian and MemPalace. Production owner-authenticated live reads were not run because no owner/operator session was available in this worker. No write adapter was exercised.

Systems

System	Status	Proof	Write State	Blocker
---	---	---	---	---
Obsidian	partial_go	Adapter tests passed; unauthenticated production route returned 401	Bridge Session required; not executed	owner_authenticated_session_required_for_live_route
MemPalace	partial_go	Adapter tests passed; unauthenticated production route returned 401	Bridge Session required; not executed	owner_authenticated_session_required_for_live_route
Graphify / memory graph	partial_go	Production route protected with 401 unauthenticated	Write not tested	owner_authenticated_session_required_for_live_route
Brain Sync	partial_go	Production status route protected with 401 unauthenticated	Rebuild/write not tested	owner_authenticated_session_required_for_live_route
Build-Wiki / Farmer	partial_go	Status route protected; timer/service proof recorded in Phase 12	Run Now gated; not executed	active_bridge_session_required

Route Protection Smoke

The following routes returned ****401**** without authentication:

- `/api/bridge/brain-sync/status`
- `/api/bridge/agent-zero/obsidian`
- `/api/bridge/agent-zero/mempalace`
- `/api/memory/graph`
- `/api/bridge/brain-sync/build-wiki/status`
- `/api/gateway/nodes/brain-sync`
- `/api/gateway/nodes/obsidian`
- `/api/gateway/nodes/mempalace`
- `/api/gateway/nodes/graphify`

Tests Passed

Command:

```
pnpm exec vitest run src/lib/agent-zero-obsidian-adapter.test.ts src/lib/agent-zero-mempalace-adapter.test.ts src/lib/hermes-brain-sync.test.ts src/lib/gateway-data-layer.test.ts --reporter=dot
```

Result:

- `src/lib/agent-zero-obsidian-adapter.test.ts`: 8 passed
- `src/lib/agent-zero-mempalace-adapter.test.ts`: 6 passed
- `src/lib/gateway-data-layer.test.ts`: 7 passed
- Total: 21 tests passed

Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env` changes.
- No Brain write action executed.
- No Build-Wiki / Farmer execution occurred.
- No SMB/Fork 2.
- No external farmers.
- Owner-facing architecture uses OpenClaw+ / Build-Wiki / Farmer; the legacy systemd service name is only used when reporting the literal unit.

Remaining Blockers

- `owner\_authenticated\_session\_required\_for\_live\_route`: owner-authenticated Brain route proof still needs a real owner/admin session.
- `active\_bridge\_session\_required`: Brain writes and Build-Wiki Run Now remain gated.
- `graphify\_live\_query\_adapter\_not\_proven`: Graphify route protection is proven, but live graph query proof is still pending.

Next Step

Proceed to Phase 17: Security and no-fake-buttons audit.
