

Phase PI-1 — Pi Runtime Baseline Report

Generated: 2026-05-07 21:38:52

Result

****PENDING / SHADOW.**** No standalone Pi repo, service, process, CLI, RPC server, or public endpoint was found. Pi currently exists as Mission Control Gateway source code: ``src/lib/gateway-pi-dispatcher.ts``, with tests and reports. This is safe for advisory shadow recommendations, but it is not a proven independent runtime session.

Discovery

Item	Result
---	---
Pi repo/path	No separate repo found. Current implementation path is Mission Control Gateway source.
Branch/HEAD	Mission Control branch <code>`to-knowledge-mc`</code> ; HEAD captured during final commit.
Package manager	Mission Control uses <code>pnpm</code> .
Runtime	In-process TypeScript/Next.js library inside Mission Control.
CLI mode	Not found.
Local server mode	Not found.
SDK/library mode	Present: <code>`src/lib/gateway-pi-dispatcher.ts`</code> .
RPC/service mode	Not found.
Public exposure	None found.
Execution/write authority	Disabled.

Safe Conclusions

- Pi is not commander.
- Pi does not replace Agent Zero, Hermes, Paperclip, SpaceAgent, or OpenClaw+.
- Pi can be modeled as a Gateway dispatcher / route optimizer candidate in shadow mode only.
- Blocker remains ``pi_runtime_session_not_proven``.

Security Confirmation

No secrets were printed. No auth files were printed. No ``env`` files were modified. No service was exposed publicly.
