

Phase PI-3 — Pi Gateway Node Proof Report

Generated: 2026-05-07 21:38:52

Result

****PARTIAL GO / protected route proof.**** Gateway contains Pi as the canonical node `pi`, owner-facing Agent Hub ID `pi-mono`, and status endpoint `/api/bridge/pi/status`. The requested `pi\_dispatcher` identity is exposed as the canonical role label in the Pi status payload, while the registry-compatible node remains `pi`.

Routes

Route	Proof
---	---
`GET /api/gateway/nodes/pi`	unauthenticated returns 401
`GET /api/gateway/nodes/pi-mono`	unauthenticated returns 401; alias protection confirmed
`GET /api/bridge/pi/status`	unauthenticated returns 401
`GET /api/gateway/agent-hub/agents/pi-mono`	unauthenticated returns 401
`GET /api/gateway/agent-hub/agents/pi-mono/health`	unauthenticated returns 401

Status Truth

- Gateway node: `pi`
- Canonical role label: `pi\_dispatcher`
- Agent Hub ID: `pi-mono`
- Status: shadow/read-only
- Execution enabled: false
- Writes enabled: false
- Public exposure: false
- Blocker: `pi\_runtime\_session\_not\_proven`

Tests Passed

- `src/lib/gateway-agent-hub.test.ts`: 3 passed
- `src/lib/gateway-route-auth.test.ts`: 1 passed
- `src/lib/gateway-pi-dispatcher.test.ts`: 9 passed

Remaining Blocker

Authenticated owner route payload proof still requires an owner/admin session. Unauthenticated protection is proven.
