

SpaceAgent YouTube Production Proof Report

SpaceAgent YouTube Production Proof Report

Generated: 2026-05-07T21:54:13.799Z

Executive Result

YouTube production proof is partial. Mission Control has a protected read-only Video Intelligence status route and the backend CLI components are visible as ready for a protected runner, but SpaceAgent still does not have a proven dedicated live transcript connector. The Gateway UI correctly shows YouTube Research as limited/pending rather than connected.

Completion

- Proof phase completion: 100% for truthful validation.
- YouTube research integration completion: 60%.
- Release decision: PARTIAL GO for read-only status and Research Packet model; NO-GO for live transcript connector.

Production Route Evidence

- Authenticated GET /api/viral-crawl/video/status: 200.
- Unauthenticated GET /api/viral-crawl/video/status: 401.
- Status mode: viralcrawlvideostatusreadonly.
- Backend state: BACKENDREADYCLI.
- Wrapper present: true.
- Vendor skill present: true.
- Skill registry present: true.
- Skill enabled: true.
- Execution enabled: false.
- Endpoint contract says no file creation, no video downloads, no vault modification, and no secret printing.
- Gateway SpaceAgent card: limitedpending, yellow.
- Gateway blocker: youtubetranscriptconnectornotproven.
- SpaceAgent research packet for YouTube metadata/transcript intent: ready as a packet model, routeddecision=allowed, executionenabled=false, writesenabled=false.

What Passed

- Protected route auth works.
- Read-only video status is available.
- SpaceAgent can classify YouTube/video research intent.
- Research Packet model exists and can represent YouTube metadata/transcript work.
- Full video download is disabled by default.
- No execution runner was invoked.
- No secrets or raw owner-facing paths were included in this report.

What Failed Or Remains Blocked

- Dedicated live transcript connector is not proven.
- No authenticated owner-approved browser/video session was used.
- No real YouTube transcript retrieval smoke was completed.
- Protected run endpoint remains intentionally disabled until queue, approval, and audit are wired.

Requirements From Owner/Admin

- Approve a safe transcript connector path for public YouTube metadata/captions.
- Approve whether the existing Video Intelligence CLI should be wrapped behind a Bridge Session runner.
- Confirm whether any account-authenticated video access is ever allowed; default remains blocked.
