Day 68 â Raw Path / Public Exposure Sweep Closure

Date: 2026-05-11

Lane: Runtime / security and owner-facing exposure

Status: PASS

Blocker class: NONE

Scope

Day 68 scans owner-facing Mission Control/Gateway surfaces and current proof reports for raw local paths, file URLs, and public-local exposure hints. The scanner reports file names and dispositions only; it does not print raw matched values.

Implementation

Files changed:

- scripts/raw-exposure-scan-contract.mjs
- src/lib/raw-exposure-scan-contract.test.ts
- public/designer-mission-control/src/settings.jsx
- public/designer-mission-control/src/settings-pages.jsx
- public/designer-mission-control/src/replicas/BuildWikiFarmerSyncPanel.jsx
- runtime/day-68-raw-path-public-exposure.json
- runtime/day-68-raw-path-public-exposure.md
- runtime/day-68-raw-path-public-exposure.pdf

Corrections Made

- Masked a public Mission Control settings deploy path as 'internal path hidden'.
- Replaced a Build-Wiki source placeholder raw home path with 'approved local source alias'.
- Reworded Build-Wiki source guidance to avoid exposing raw host prefixes while preserving owner-approved/local-source semantics.
- Replaced the visible firewall example '0.0.0.0/0' with 'public internet /0'.
- Preserved Gateway FULL v3 mock contract files; no Gateway design HTML/CSS/class names were changed.

Scanner Behavior

The scanner targets current owner-facing surfaces and current proof artifacts:

- Mission Control catch-all shell
- Gateway pages
- login/settings pages
- components
- public designer Mission Control assets
- public Gateway design assets
- current Day 66, Day 67, and Day 68 runtime reports

It blocks unresolved raw local paths, file URLs, public bind examples, ngrok/trycloudflare/funnel hints, and similar public exposure strings.

Runtime Proof

Command:

node scripts/raw-exposure-scan-contract.mjs > runtime/day-68-raw-path-public-exposure.json

Result summary:

- ok: true
- blocker_class: NONE
- blockers: []
- raw_exposure_files: 0
- public_exposure_files: 0
- unresolved_raw_exposure_files: 0
- unresolved_public_exposure_files: 0
- values_printed: false

Tests

Focused test coverage:

- allowlisted diagnostics/developer fixtures

- owner-facing source files block when unresolved
- allowlisted-only scan passes

Full validation is recorded in the final closeout after command execution.

Deploy / Restart

Static public assets changed. A rebuild syncs public assets into the standalone bundle. Restart/redeploy is required before production owner visual confirmation if this lane is deployed independently.

Security Confirmation

No .env changes.

No secrets printed.

No auth weakening.

No public exposure added.

No external writes.

Rollback

After commit, use:

git revert <day-68-commit-sha>

Next Day Started

After Day 68 commit/push, continue automatically to Day 69 â Rollback Plan Per Lane 100% Closure
