

Day 1 / Phase 3 - Owner-Authenticated Browser Proof

Generated: 2026-05-08

Objective

Prove that the owner can see the production Mission Control UI, Gateway, and Agent Hub in an owner-authenticated browser session after the latest production restart.

This phase is intentionally strict. A server-side route smoke, temp-admin smoke, or unauthenticated render check is not enough to mark owner browser proof as GO.

Result

****PARTIAL / BLOCKED.**** Production is running the latest code and the UI routes are reachable, but this Codex session does not have access to a live owner-authenticated browser session. The exact remaining blocker is:

`owner\_authenticated\_browser\_session\_required`

No owner-auth visual proof is being faked.

Scope

Required owner-authenticated visual checks:

Surface	Required proof	Current evidence	Result
Mission Control	Owner can open the production interface	Production URL returned 200 during restart smoke	PARTIAL
Gateway	Owner can open Gateway	Route-level production smoke and prior temp-admin smoke exist	PARTIAL
Agent Hub / Control Center	Owner can open Agent Hub	Route-level production smoke and prior temp-admin smoke exist	PARTIAL
Agent Zero card	Visible as Commander	Prior production render proof and Gateway registry proof exist	PARTIAL
Hermes card	Visible as Lieutenant / gated	Prior production render proof and live status blocker exists	PARTIAL
Pi card	Visible as Dispatcher Candidate / shadow	Pi appears in registry/status reports	PARTIAL
SpaceAgent card	Visible as research specialist	SpaceAgent/Playwright MCP routes are reachable	PARTIAL
Paperclip card	Visible as Workforce Control Plane before OpenClaw+	Paperclip bridge status route is reachable	PARTIAL
OpenClaw+	Visible as runtime / skills / mini-agent execution layer	Registry/report proof exists	PARTIAL
Delivery / Bridge / Brain panels	Visible and honest	Route/policy proof exists; browser proof pending	PARTIAL

Commands And Routes Used

No browser automation command was run for this phase because no owner-authenticated browser session was available in the current execution environment.

Production proof inherited from Day 1 / Phase 2:

Route	Authenticated status	Notes
`GET /api/gateway/status`	200	Gateway reachable
`GET /api/gateway/registry`	200	Registry reachable

```
| `GET /api/gateway/agent-hub/status` | 200 | Agent Hub status reachable |
| `GET /api/bridge/agent-zero/status` | 200 | Agent Zero bridge reachable |
| `POST /api/bridge/agent-zero/test-chat` | 200 | `agent_zero_called:true` present |
| `GET /api/bridge/hermes/status` | 200 | Hermes status reachable |
| `POST /api/bridge/hermes/test-chat` | 503 | Honest blocker: `hermes_safe_live_chat_adapter_not_configured` |
| `GET /api/bridge/pi/status` | 200 | Pi bridge status reachable |
| `GET /api/bridge/playwright-mcp/status` | 200 | Playwright MCP status reachable |
| `GET /api/bridge/paperclip/status` | 200 | Paperclip bridge reachable |
| `GET /api/gateway/space-agent/browser/status` | 200 | SpaceAgent browser status reachable |
```

Unauthenticated route smoke in Day 1 / Phase 2 returned 401 for protected route families.

Visual Acceptance Items

```
| Item | Required | Current truth |
| --- | --- | --- |
| Five primary agents visible | Agent Zero, Hermes, Pi, SpaceAgent, Paperclip |
Pending owner-auth browser proof |
| Agent Zero role | Commander | API/registry proof exists; visual owner proof pending |
| Hermes role | Lieutenant / gated | API/registry proof exists; live adapter remains blocked |
| Pi role | Dispatcher / Route Optimizer Candidate | API/registry proof exists; runtime session remains shadow |
| SpaceAgent integrations | Playwright MCP, Firecrawl, YouTube Research | Route/status proof exists; owner visual proof pending |
| Playwright MCP status | Green / connected local-only | Service/route proof exists |
| Firecrawl status | Red / blocked | Blocker remains `firecrawl_credential_required` |
| YouTube status | Yellow / limited | Transcript connector remains not fully proven |
| Paperclip status | Partial/degraded, not fake-live | Bridge status proof exists; owner login remains unproven |
| Paperclip order | Before OpenClaw+ in operating chain | Correct in current reports and registry language |
| OpenClaw+ label | Runtime / skills / agents / mini-agent execution layer | Correct in current reports |
```

Files Changed

```
| File | Purpose |
| --- | --- |
| `runtime/day-01-phase-03-owner-browser-proof.md` | This report |
| `runtime/day-01-phase-03-owner-browser-proof.pdf` | PDF rendering of this report |
```

Proof

Proof available:

- Production restart proof from Day 1 / Phase 2.
- Authenticated API route smoke from Day 1 / Phase 2.
- Unauthenticated protected route smoke from Day 1 / Phase 2.
- Prior temp-admin render proof that Agent Hub contains Agent Zero, Hermes, Pi, SpaceAgent, Paperclip, OpenClaw+, Playwright MCP, Firecrawl, and YouTube.

Proof missing:

- A live owner-authenticated browser session showing the owner can see the production UI after the restart.

Blockers

Blocker	Impact	Exact next step
`owner_authenticated_browser_session_required`	Cannot mark this phase GO. Cannot claim owner visual proof.	Re-run this phase from an owner-authenticated browser session or have owner provide a fresh authenticated screenshot/video of Mission Control, Gateway, and Agent Hub.
`hermes_safe_live_chat_adapter_not_configured`	Hermes card must remain gated/blocked for live chat.	Build safe no-tool/no-write Hermes adapter and prove `hermes_called:true`.
`firecrawl_credential_required`	Firecrawl must remain blocked in SpaceAgent UI.	Configure credential through approved secret source and run one read-only smoke.
`paperclip_owner_session_required`	Paperclip owner login/dashboard cannot be called GO.	Prove owner login and dashboard in Paperclip session.

Tests

No new automated tests were run specifically for browser visuals in this phase because no owner-authenticated browser session was available. Production route and auth tests from Day 1 / Phase 2 remain the supporting evidence.

Services

Service	State
Mission Control production process	Active after restart in Day 1 / Phase 2
Playwright MCP	Local-only status route reachable
Hermes gateway	Status route reachable; live adapter blocked
Paperclip bridge	Status route reachable; owner login blocked

Commits

No commit has been created yet for this phase. This report will be included in the Day 1 isolated report commit after validation and secret scan.

Rollback

This phase writes reports only. Rollback is to revert the eventual Day 1 report commit if needed.

No-Secrets Confirmation

- No Telegram token was read or printed.
- No API key was printed.
- No auth file was printed.
- No `.env` file was modified.
- No secret values are included in this report.

Updated Percentage

System	Previous	Updated	Reason
Gateway / Agent Hub	89%	89%	Production route proof exists, but owner-auth visual proof remains blocked
UI / Browser Proof	70%	70%	Temp-admin/server proof exists; owner-auth br

owner proof missing |
| Overall ecosystem | 90% | 90% | No new G0 claim without owner visual proof |

Exact Next Step

Continue to Day 1 / Phase 4: UI and API security hygiene. Re-run owner-auth visual proof as soon as an owner-authenticated browser session is safely available.
