

day-01-agent-zero-closure

Day 01 - Agent Zero Closure

Date: 2026-05-09

Status: CREDENTIAL_GATED - developer-side proof harness complete, not GO

Lane

Agent Zero is the intended active commander. This day does not claim Agent Zero is 100% live, because read-only test chat is blocked by a missing external API key.

What Was Verified

- Branch: 'to-knowledge-mc'
- Runtime bind: '127.0.0.1:3337'
- Runtime PID: '8391'
- Deployed source commit for current runtime: 'e814ba1b057cd11afdbae1ac203c9256aa1ff2a2'
- Branch HEAD after reports: 'b811cec6f53e8c1882f3ac7b5a6f320aad952ab'
- '/api/bridge/agent-zero/status': 200
- Agent role from status route: 'ecosystem commander'
- '/api/bridge/agent-zero/test-chat': 503 with exact blocker
- Exact blocker: 'agent_zero_external_api_key_missing'
- 'agent_zero_called': false for test-chat prompts because the external API credential is not available

Commander Questions

The required commander prompts were attempted through the authenticated read-only test-chat route:

- Who is commander?
- Is Tony active?
- What agents can you see?
- What tools can you see?
- What skills can you see?
- What integrations can you see?
- What is Pi?
- What is Hermes?
- What is Paperclip?
- What is OpenClaw+?

Every prompt returned the same blocker before model execution:

```
""text
agent_zero_external_api_key_missing
""
```

Because Agent Zero was not actually called, no answer is treated as proof.

UI / Registry Truth

- Agent Hub status now includes CloudCode 'buildAgentHealth' output.
- Agent Zero does not get promoted to fake LIVE by the new Gateway truth layer.
- Agent Zero remains commander in the status model, but live chat proof is credential-gated.

Tests / Validation Already Run In This Workstream

- 'git diff --check': PASS
- 'pnpm run typecheck': PASS
- 'pnpm run build': PASS
- 'pnpm test': PASS, 171 files / 1356 tests
- Backend-support typecheck/build/tests: PASS
- Protected-file invariant scan: PASS

- Changed-file secret scan: PASS
- Staged secret scan: PASS
- '.env' status check: clean

Blocker Classification

- Blocker class: 'CREDENTIAL_GATED'
- Owner action required: provide or approve the Agent Zero external API credential path without exposing the value.
- Codex action after credential is available: rerun '/api/bridge/agent-zero/test-chat' and require 'agent_zero_called:true'.

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure.
- No delivery/execution write attempted.
- No fake Agent Zero response was recorded.

Rollback

This day added a report only. Roll back the report commit after it is created:

```
""bash
git revert <day-01-report-commit>
""
```

Next Day Started

Day 02 - Hermes closure starts next. Hermes must be proven with a live safe adapter call or classified with an exact blocker.
