

Gateway v3 Owner Re-Test Checklist

Objective

Give the owner exact steps to verify the fixed Gateway/Agent Hub UI in production.

Owner Re-Test Steps

1. Log in to Mission Control.
2. Open '/gateway'.
3. Confirm Gateway tab rail is visible:
 - Overview
 - Routes
 - Registry
 - Policies / Bridge
 - Health
 - Dispatcher
 - Token Governor
 - Agent Hub
4. Click **Agent Hub**.
5. Confirm top exit controls are visible above the fold:
 - Mission Control Home
 - Dashboard
 - Gateway Overview
 - Agent Hub
6. Confirm breadcrumb is clickable:
 - Mission Control / Gateway / Agent Hub
7. Scroll down to bottom of Agent Hub page.
8. Scroll back to top.
9. Click **Gateway Overview** and confirm page loads.
10. Click **Mission Control Home** and confirm page loads.
11. Open '/agent-network' and verify it lands on Gateway Agent Hub.
12. Open '/agents' and verify it lands on Gateway Agent Hub.
13. Confirm each alias page still exposes a clear way back to Gateway and Mission Control.
14. Confirm no fake buttons are present.
15. Confirm no raw paths or secrets are shown in UI.

Expected Result

- Navigation is not trapped.
- Scroll behavior is natural.
- Gateway FULL v3 feels embedded in Mission Control shell.

Blocker Mapping

- If owner cannot see exits/breadcrumbs: 'owner_visual_proof_partial_navigation_layout_defect'
- If owner cannot scroll naturally: 'gateway_scroll_layout_trap_persists'
- If alias routes do not land correctly: 'gateway_alias_routing_regression'

No-Secrets Confirmation

- Checklist does not request tokens or secrets.
- No auth-file actions required.

Exact Next Step

- Owner shares pass/fail notes for each step so final UI decision can be set to GO or remain PARTIAL.
