

Gateway v3 UI Shell Navigation Fix

Objective

Restore clear in-app navigation so Gateway/Agent Hub feels embedded in Mission Control, not trapped.

Actions

1. Added persistent exit controls to Gateway shell:
 - Mission Control Home
 - Dashboard
 - Gateway Overview
 - Agent Hub
2. Added clickable breadcrumb structure in Gateway shell:
 - Mission Control / Gateway / current tab
3. Added equivalent exit/breadcrumb controls directly on:
 - Agent Hub main page
 - Agent Hub Paperclip drill-down page
 - Gateway Status page
 - Gateway SpaceAgent page
4. Kept alias behavior unchanged ('/agent-network', '/agents' -> '/gateway/agent-hub').

Files Changed

- 'src/components/gateway/GatewayControlShell.tsx'
- 'src/components/gateway-agent-hub/AgentHubControlCenter.tsx'
- 'src/app/gateway/status/page.tsx'
- 'src/app/gateway/space-agent/page.tsx'

Commands / Routes

- Route targets wired in controls:
 - '/tkmc'
 - '/gateway'
 - '/gateway/agent-hub'

Proof

- Header-level nav and breadcrumbs are now rendered above the fold on Gateway and Agent Hub surfaces.
- Exit routes are explicit; browser back button is no longer required as primary navigation.

Blockers

- Owner re-test still required for final UI GO call.

Tests

- 'pnpm run typecheck' PASS
- 'pnpm test' PASS
- 'pnpm run build' PASS

Services

- No runtime restart executed in this phase.

Commits

- Pending at report creation time.

Rollback

- Planned after commit: 'git revert <ui_navigation_commit_sha>'

No-Secrets Confirmation

- No secrets printed.
- No '.env' changes.
- No auth weakening.

Updated Percentages

- Gateway/Agent Hub navigation lane: increased (clear exit controls restored).

- Overall UI proof remains PARTIAL until owner re-test.

Exact Next Step

- Validate scroll behavior end-to-end on all Gateway routes and finalize owner re-test package.
